CONTENTS

OF THE

REGISTRAR GENERAL'S ANNUAL REPORT FOR 1879.

REPORT:— PAGES

INTRODUCTION v

EMIGRATION and IMMIGRATION . . . . . v–vi

INCREASE of POPULATION vi

PRICES of WHEAT, MEAT, POTATOES, and COAL; MEAT IMPORTED . vi

PAUPERISM . . . . . vi–vii

MARRIAGES; Marriage-rate; Number of Marriages celebrated according and *not* according to the Rites of the Established Church; Previous condition of Persons married; Ages of Persons married; Marriages of Minors; Signatures in Marriage Registers; Buildings registered for the Solemnization of Marriages; Certified Places of Worship; Designations of Religious Bodies . . . . . vii–xiii

BIRTHS. Number registered; Birth-rate, Legitimate and Illegitimate; Local Variations of Legitimate and Illegitimate Birth-rates; Sex . xiii–xx

DEATHS. Number registered; General death-rate; Local Rates; Sex; Mortality of Males and Females at various Ages; Increase of Mortality among Adults; Influence of Intemperance; Deaths in Public Institutions in England and in London; Registered Causes of Death of different classes; Certification of Causes of Death . xx–xxxiv

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE xxxiv

THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD . . . . . xxxiv–v

THE NAVY. STRENGTH and MORTALITY of the NAVY . . . xxxv–v

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY by DROWNING in the MERCHANT SERVICE compared with that in the ROYAL NAVY . . . . . xxxvi–vii

EUROPEAN STATES. Marriage, Birth, and Death Rates . . . xxxvii–vii

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xxxix–xl

PRELIMINARY TABLES . . . . . xli–cli

ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions, Counties, and Districts; distinguishing those according and those *not* according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks 2–25

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 26–28

ABSTRACTS—*continued.* PAGES

Marriages, Births, and Deaths Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, and Districts; also Births and Deaths and Excess of Births over Deaths in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout 30–84

Births Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 86–89

Births of Children born out of Wedlock Registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 90–93

Deaths Registered in Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters 94–97

Deaths of Males and Females in Public Institutions 99–120

Deaths of Males and Females at different Ages Registered in Divisions, Counties, and Districts 122–143

Causes of Death of Males and Females in England at different Periods of Life 146–155

Causes of Death of Males and Females in London at different Periods of Life 156–161

Causes of Death of Males and Females in England, and in each of the Divisions and Counties 162–185

Deaths from several Zymotic and other Causes, and Inquest Cases, in the Divisions, Counties, and Districts of England . 186–197

Violent Deaths in England, distinguishing Sex and Age 198–204

Violent Deaths in each of the Eleven Divisions of England, distinguishing Sex 205–211

Deaths returned as having occurred from Suicide in England, distinguishing Sex and Age 212–213

Deaths returned as having occurred from Suicide in each of the Eleven Divisions of England, distinguishing Sex 214, 215

Deaths returned as having occurred from Murder and Infanticide in England, distinguishing Sex and Age 216, 217

Deaths returned as having occurred from Murder and Infanticide in each of the Eleven Divisions of England, distinguishing Sex . . 218

Deaths returned as having occurred from Manslaughter in England, distinguishing Sex and Age 219, 220

Deaths returned as having occurred from Manslaughter in each of the Eleven Divisions of England, distinguishing Sex 221

Index of Districts, Sub-districts, and of certain Towns, referring to Numbers used in the several Tables of Abstracts 223-238

REPORT

TO

The Right Honourable JOHN GEORGE DODSON, M.P. President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March 1881.

(1879.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the births, marriages, and deaths that were registered in England and Wales during the year 1879.

It will be found that the year was remarkable in many respects from a statistical point of view. It was, with one exception, the coldest year of the century; its marriage-rate was the lowest on record; its birth-rate the lowest but one since 1861, having been equalled only twice—in 1862 and 1871; and its death-rate the lowest but one since 1856. No year in our tables was so free from those diseases which spread by infection and contagion; in none were there so few deaths from fevers or from diarrhœa, in proportion to the population; never before was the death-rate from accident or from homicide so low; nor, on the other hand, was the number of persons who committed suicide ever before so high.

The low birth and marriage rates, as also the increase in suicide, may be referred to the continued depression in industrial and agricultural interests; to which cause may also be attributed the facts that the number of persons in receipt of relief, the amount of money expended in actual relief of the poor, and the number of persons who left the country to seek their fortunes in foreign lands, were all more or less in excess in 1879 as compared with recent years.

Emigration and Immigration.—It appears from the returns made by the Board of Trade, that the number of emigrants of British origin had diminished year by year from 1873 to 1877. In 1878 the tide turned, and a not inconsiderable increase was registered. The increase was still greater in 1879, when the total number of British emigrants rose from 112,902 to 164,274.

The effect upon the population of this increased emigration was augmented by a simultaneous decrease of immigration, the number of immigrants of British origin having fallen from 54,944 to 37,936. Thus the balance of loss to the native population, or excess of emigrants over immigrants, amounted to 126,338, being "more than double the excess "in 1878, more than four times the excess in 1877, and between three "and four times the excess in 1876."*

---

* Mr. Giffen's Report, p. 4.

Of the emigrants 104,275 were English, 18,703 were Scotch, and 41,296 were Irish. On the probable hypothesis that the 37,936 British immigrants were distributed in the same proportions, as regards their origin, the loss to the population of England and Wales in the year was 78,892, To these must be added 2128 more, as the English proporton of 3409 emigrants whose nationality was not ascertained; making the total loss, so far as can be estimated, 81,020.

The increased current of emigration set, as in the preceding year, almost entirely in the direction of North America, and very slightly in that of Australasia.

Increase of Population.—The numbers of births and deaths registered in the year were 880,389 and 526,255, respectively; so that the natural increase of the population was 354,134. Deducting from this number 81,020, as the probable loss by the excess of English emigrants over English immigrants, we have 273,114 as the probable increase of the population in 1879, irrespectively of any addition from Scotch, Irish, or Foreign settlers who may have established themselves during the year in the country, in excess of similar persons who left.

Prices.—Commercial depression was greater during 1879 than it had been in 1878, and was especially marked in the iron and coal industries. The fall in the value of money caused the average price of Consols, which had been 95$\frac{4}{8}$*l.* and 95$\frac{2}{8}$*l.* in 1877 and 1878, to rise to 97$\frac{5}{8}$*l.* in 1879. To the good harvest in 1878 was probably partly due a further fall in the price of wheat, which averaged 43*s.* 10*d.* in 1879, against 56*s.* 9*d.* and 46*s.* 5*d.* in 1877 and 1878; this considerable fall in the price of wheat occurred notwithstanding the exceptionally bad harvest of 1879, which caused a rise in the last two quarters of the year. The price of meat also showed a decline. The mean wholesale prices of beef and of mutton were respectively 5$\frac{6}{8}$*d.*, and 6$\frac{5}{8}$*d.* per lb. by the carcase, at the Metropolitan meat market; in 1873 the mean prices of beef and mutton were 7*d.* and 7$\frac{6}{8}$*d.* per lb., respectively, since which the prices have, with some fluctuations, declined. The price of the best potatoes per ton at the Waterside market, Southwark, which was but 99*s.* 6*d.* in 1875, has since steadily increased, and was 157*s.* 9*d.* in 1879. The average price of the best seaborne coal in the London market, put in barge from the collier in the Thames, was only 15*s.* 10*d.*; in 1873 the average price of the best coal was 30*s.* 9*d.*, since which it has steadily fallen, and the price in 1879 was lower than that in any year since 1862 when it was also 15*s.* 10*d.*

Pauperism.—The average number of paupers (returned on the last day of each week) rose in 1879 very considerably above the numbers in preceding years; as also did the total amount of money expended in actual relief.

TABLE A.—PAUPERISM AND ITS COST, 1876–79.

YEARS.	AVERAGE NUMBER OF PAUPERS RELIEVED on the last day of each week.				AMOUNT EXPENDED in actual Relief of the Poor.
	Indoor.	Outdoor.	TOTAL.	Rate per 1000 of Population.	
					£
1876 - -	137,930	531,344	669,274	27·61	7,335,858
1877 - -	146,851	519,506	666,357	27·15	7,400,034
1878 - -	154,961	527,986	682,947	27·48	7,688,650
1879 - -	165,590	570,576	736,166	29·25	7,829,819

The increased proportion of pauperism in 1879, however, compared very favourably with the return for 1870, when the average number of paupers in receipt of in-door and out-door relief was 978,001, and was equal to 43·5 per 1000 of the estimated population in the middle of the year.

Marriages.

If, as is generally admitted, the marriage-rate be a fair measure of the commercial and agricultural prosperity of the country, the year 1879 must have been one of extraordinary depression; for the marriage-rate of that year was the lowest on record since civil registration began.

The rate in 1873 was 17·6; from that time it fell uninterruptedly, year by year, until in 1879 it was no more than 14·5. Thus there has been a decline of nearly 18 per cent. in the course of six years. Had the rate remained during those six years at the same level as in 1873, 233,544 persons would have been married, who, as it was, remained single.

The decrease was not confined to any one class of districts, but was general, though its amount differed very largely indeed in different parts. This is shown in the following table, in which the marriage-rate in each county in 1879 is compared with the mean rate in the two years 1872–73; and the rate of decrease per cent. is given. The counties are arranged in the order of their decreases; and it will be seen that, speaking generally, the mining districts head the list, then follow the manufacturing districts, while the agricultural and the Metropolitan districts come last.

Table B.—Decrease per Cent. of the Marriage-rate in 1879 in the several Counties, from the Average Rate in the two years 1872–73.

Forms of Marriage.—Of the 182,082 marriages celebrated in 1879, 131,689, or 72·3 per cent., were solemnised according to the rites of the Established Church, and 50,393, or 27·7 per cent., otherwise. The subjoined table shows the proportions of marriages in the Established Church by license, banns, and Superintendent Registrar's certificate. It will be seen that the proportion of marriages by banns, which began to increase some twenty years ago, at the expense of marriages by license or by certificate, still maintains its position.

TABLE C.—OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841–79.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS of MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.*				
	Total.	Special License.	License.	Banns.	Superintendent Registrar's Certificate.
1841–45 - -	100	·01	15·42	83·28	1·29
1846–50 - -	100	·01	15·47	82·39	2·13
1851–55 - -	100	·01	15·58	81·53	2·88
1856–60 - -	100	·01	16·01	80·88	3·10
1861–65 - -	100	·01	14·93	81·94	3·12
1866–70 - -	100	·01	13·56	83·43	3·00
1871–75 - -	100	·01	11·58	85·71	2·70
Year 1876 - -	100	·02	11·89	85·59	2·50
„ 1877 - -	100	·01	11·55	85·96	2·48
„ 1878 - -	100	·02	11·29	86·22	2·47
„ 1879 - -	100	·02	10·90	86·64	2·44

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

It is to be regretted that the information concerning church marriages is neither so perfect, nor transmitted so promptly to the Registrar General, as that concerning marriages celebrated elsewhere. The clergy often neglect to insert in the register the words "by banns," "by license," &c., or to fill up in due form the column relating to the ages of the persons married, thus rendering the returns incomplete; and it is entirely owing to the late date at which the returns of church marriages are received, that the marriage statistics in the quarterly reports made by the Registrar General are always three months behind-hand as compared with the statistics of births and deaths.

The particulars required for the accurate construction of the last table were omitted in 586 church marriages, or in 4·4 per 1000 marriages. The proportion of omissions has not varied much in the last few years, as the following figures show:

1876 - - -	4.7	per 1000
1877 - - - -	4·8	„
1878 - - -	4·6	„
1879 - - - -	4·4	„

The differences, however, in this respect presented by different parts of the country are very considerable, and show much greater carelessness on the part of the clergy in some districts than in others.

TABLE D.—PROPORTION of MARRIAGES in the ESTABLISHED CHURCH, the form of which was not entered, whether by LICENSE, by BANNS, or by SUPERINTENDENT REGISTRAR'S CERTIFICATE.

REGISTRATION DIVISIONS.	Proportions in 1000 Church Marriages.			
	1876.	1877.	1878.	1879.
ENGLAND - - -	4·69	4·79	4·64	4·45
London - - - -	1·15	0·73	0·49	0·25
South-Eastern Counties - -	8·14	11·16	10·45	8·93

Eastern Counties - - -	13·83	10·11	11·70	7·88
South Western Counties - -	10·98	11·38	8·74	9·76
West Midland Counties - -	5·38	6·08	4·16	5·30
North Midland Counties - -	4·22	4·48	5·17	5·61
North Western Counties - -	0·68	1·00	1·29	2·43
Yorkshire - - -	3·38	3·00	2·66	2·41
Northern Counties - - -	3·71	3·63	1·29	4·91
Monmouthshire and Wales -	7·59	5·70	8·75	5·59

Of the 50,393 marriages, not according to the rites of the establishment, 7437, or 14·76 per cent., were solemnised in Roman Catholic places of worship, and 20,673, or 41·02 per cent., in the chapels of other Christian denominations; 54 were celebrated according to Quaker rites; 460 were marriages of Jews; and 21,769, or 43·20 per cent., were marriages in the offices of Superintendent Registrars.

First Marriages; Re-marriages. Males.—Of the 182,082 men who married in 1879, 157,553, or 87 per cent., were bachelors, and 24,529, or 13 per cent., were widowers.

Of the 157,553 bachelors, 149,768, or 95 per cent., married spinsters, and 7785, or 5 per cent., married widows.

Of the 24,529 widowers who re-married, 14,959, or 61 per cent., married spinsters, and 9570, or 39 per cent., married widows.

Females.—Of the 182,082 women who married, 164,727, or 90 per cent., were spinsters, and 17,355, or 10 per cent., were widows.

Of the 164,727 spinsters 149,768, or 91 per cent., married bachelors, and 14,959, or 9 per cent., married widowers.

Of the 17,355 widows who re-married, 7785, or 45 per cent., married bachelors, and 9570, or 55 per cent., married widowers.

The re-marriages of widows were, as always, much fewer than those of widowers, and were in the proportion of 71 to 100 of the latter.

The marriages of persons described as divorced have been gradually increasing for many years, and were more numerous in 1879 than in any previous year, as is shown in the subjoined table. The total number registered in the last 19 years, to which the table relates, was exactly 1000; so that the upper line in the table gives at once, without calculation, the proportions per 1000 of persons in different civil conditions who contracted such alliances.

TABLE E.—MARRIAGES of DIVORCED MEN and WOMEN in ENGLAND, 1861–79.

YEARS.	TOTAL MARRIAGES of Divorced Men and Women.	MARRIAGES BETWEEN				
		Divorced Men and Spinsters.	Bachelors and Divorced Women.	Divorced Men and Widows.	Widowers and Divorced Women.	Divorced Men and Divorced Women.

1868 - - -	40	16	17	2	4	1
1869 - - -	47	15	17	5	8	2
1870 - - -	34	19	10	1	4	-
1871 - - -	50	23	19	1	7	-
1872 - - -	58	22	21	4	9	2
1873 - - -	62	26	20	4	9	3
1874 - - -	61	27	18	5	9	2
1875 - - -	69	31	22	6	10	-
1876 - - -	90	49	20	8	13	-
1877 - - -	82	26	30	11	14	1
1878 - - -	107	43	32	12	18	2
1879 - - -	115	49	38	13	13	2

Ages at Marriage.—In 36,694 cases the officiating minister or the registrar neglected to insert the ages of both parties to a marriage in the register. This is a slight improvement upon former years; and, as the improvement has been progressing uninterruptedly for a succession of many years, it may be hoped that this flaw in our statistics will soon be reduced to insignificance.

The mean age at marriage, as determined for the 145,388 couples whose ages were duly stated, was 27·9 years for men, and 25·6 years for women. The mean age of the bachelors was 25·8 years, of the spinsters 24·3; of the widowers 43·2, and of the widows 39·8.

Minors.—The numbers of men and women under age who married in 1879 were 13,400 and 38,942 respectively; so that of every 100 men married 7·36, and of every 100 women married 21·39 were minors. These premature marriages had increased continuously almost from the beginning of civil registration until some few years back (Table 8); a check was then put to them by the increasing difficulty in obtaining well-paid employment, and since 1874 there has been a slow but unbroken decline in their proportions. The decline has been greater for men, as might be anticipated, than for women, being for the former 12·2 per cent. in the five years, and 5·8 for the latter.

Signature in Marriage Register.—Of the 364,164 persons who married in 1879, 58,641, or 16·2 per cent., signed the register with marks, and of these 25,037 were men and 33,604 were women. In 12,210 marriages bridegroom and bride alike were unable to sign except by mark.

The proportion of persons who when they marry are unable to write their names is steadily diminishing. It has indeed been declining for many years past, but of late the rate of decrease has been rapidly augmented, as is seen in the following statement:—

Average Annual Decrease per cent. in the proportion of persons married who signed the register by mark.

1845–50	1·34
1850–55	1·77
1855–60	2·68
1860–65	2·73
1865–70	2·58
1870–75	3·06
1875–79	5·37

These figures bear indisputable testimony to the increasingly rapid spread of elementary education in comparatively recent years. In estimating that spread it must also be borne in mind, that the present system of compulsory education is but of few years standing, and that comparatively few of those who were old enough to marry in 1879 had come, when children, under its operation. It may be anticipated that the decrease in the proportion of persons who cannot sign their names in the register will be still greater in the ensuing quinquennium.

The marriage registers show that very great differences exist between different counties in the actual amounts of educational deficiency, and also in the amount of improvement that has been effected in this respect. But in every county, without exception, there is evidence, on comparing the statistics of 1879 with those of the ten preceding years, that considerable improvement has been made.

In the following Table the counties are arranged in the order of educational deficiency as tested by the register of 1879.

TABLE F.—Of 100 PERSONS MARRIED in the several COUNTIES, the NUMBER who signed the REGISTER with MARKS in 1879 compared with the AVERAGE ANNUAL NUMBER during the 10 years 1869–78.

The improvement in education has affected both men and women, but women slightly more than men; the proportion of men who could not write their names having fallen 30·3 per cent. since 1870, and that of women 32·2 per cent.

Taking the whole country, women are much behind men in the matter of elementary education. Of every 100 men who married in 1879, 86 were able to sign their names, but of every 100 women only 82 were able to do so. But if, instead of considering the aggregate country, we take the counties separately (see Table 10) very different results are often obtained, and in many cases the women are found to be far ahead of the men in an educational point of view.

The following are the registration counties in which the women are worse educated than the men :—

London.	Derbyshire.
Northamptonshire.	Cheshire.
Bedfordshire.	Lancashire.
Devonshire.	Yorkshire (all three Ridings).
Cornwall.	Durham.
Shropshire.	Northumberland.
Staffordshire.	Cumberland.
Worcestershire.	Westmorland.
Warwickshire.	Monmouthshire.
Leicestershire.	North and South Wales.
Nottinghamshire.	

In the remainder the men are worse educated than the women; and this not only according to the returns of 1879, but, with the addition of Gloucestershire, according to the average obtained from the returns of the ten preceding years.

The general rule appears to be this ; the male is the worse educated sex in the agricultural districts, the female in the mining and manufacturing districts, including in these latter such districts as Bedfordshire and Devonshire, where there are special employments occupying considerable numbers of young women.

Buildings registered for the Solemnisation of Marriages.—The number of these buildings (see Table 11) on December 31st, 1879, was 8,425, showing an increase of 174 during the year. Of this increase, Independents contributed 24, Baptists 34, Roman Catholics 14, Wesleyan Methodists of all descriptions 72, Calvinistic Methodists 13, and other sects 17.

Certified Places of Worship.—There were 20,396 places of worship on the register on the 31st December 1879, showing an increase of 419 during the year. To the list of designations of congregations, with certified places of worship, published in previous annual reports, has now to be added that of the "Benevolent Methodists and Dependents," which makes its appearance for the first time in the list.

Births.

The births registered in 1879 amounted to 880,389, and were considerably below the numbers registered in each of the three preceding years (Table 13). The birth-rate was 35·0, which was the lowest since 1871, when the rate was the same. The birth-rate had fallen continuously each year since 1876, having been successively 36·6, 36·2, 35·9, and 35·0 (Table 2). This decline was doubtless due to the depression in the marriage-rate, which had fallen uninterruptedly since 1873, and in 1879 was lower than any previously recorded. In strict accordance with this explanation is the fact that the diminished rate was entirely due to a falling off in the legitimate births, the illegitimate births showing no decline.

The birth-rate, or proportion of registered births to the total population, varied very considerably, as always has been the case, in different counties. These variations depend, of course, mainly upon differences of age-distribution in the population, some counties, notably the mining and manufacturing, having a much larger proportion of persons of reproductive ages in their population than others.

In the following table, which relates, however, only to legitimate births, this interfering cause has been excluded, the rate shown for each county being the proportion of legitimate births to wives of reproductive ages.

TABLE G.—LEGITIMATE BIRTHS in relation to NUMBER and AGE of WIVES, in COUNTIES.

Col. 1.	2.	3.	4.
REGISTRATION COUNTIES.	Average Annual Legitimate Births per 1000 Wives aged 15–45. (1869–78.)	Per-centage of Wives aged 15–30 to Wives aged 15–45. (1871.)	Average Annual Proportion of Minors among each 100 Women Married. (1869–78.)
Hampshire	266·5	36·9	19·6
Surrey	269·2	36·5	15·3

South Wales	331·9	37·2	20·9
North Riding	364·9	37·3	24·4

This table shows, by its second column, that, even when allowance has been made for differences in the number of reproductive wives, there still remain notable contrasts in the county birth-rates; and that still, as on the usual method, the highest rates are on the whole in the mining and manufacturing districts. It seemed possible that an explanation of this might be found by differences within the class itself of wives of reprotive ages, the wives being younger in some counties than others, and the younger wives the more prolific. In order to test this hypothesis, the wives have been divided into two groups, those under 30, and those above this age but under 45; and secondly, as another and perhaps better test, the proportion of women married while under age has been taken. The results are given in columns 3 and 4 of the table. It will be seen that, speaking generally and disregarding unexplained exceptions, the figures confirm the hypothesis. In those counties, as a rule, where 1000 wives of reproductive ages produce a more than average number of children in a year, a more than average proportion of those wives are under 30, and a more than average number of women who marry are minors. There are 45 registration counties, including London. In 26 of these the legitimate birth-rate is not above the average, and in 23 of these 26 the proportion of young wives, that is of wives under 30, to wives at all productive ages is below the average. On the other hand, there are 19 counties in which the legitimate birth-rate, as here calculated, is above the average, and in 8 of these the proportion of young wives is also above the average. Again, of the 26 counties with legitimate birth-rates not exceeding the average, only 6 are localities where the proportion of minors among married women is above the average; while, of the 19 where the legitimate birth-rate is above the average, no less than 13 are distinguished by a higher than average proportion of under-age brides.

Arranging the counties in two groups, according as the legitimate birth-rate is below or above the average, we have results which may be thus tabulated:—

TABLE H.—LEGITIMATE BIRTHS, in relation to NUMBER and AGE of WIVES, in groups of Counties (Means of County Rates).

Col. 1.	2.	3.	4.
——	Annual Legitimate Births per 1000 Wives aged 15–45.	Proportion of Wives under 30 to 100 Wives of 15–45 years of age.	Annual Proportion of Minors Married to 100 Women Married.
The 26 Counties with lowest legitimate rates	284·0	35·9	19·5
The 19 Counties with highest legitimate rates	312·9	37·2	23·4

The differences, then, in the legitimate birth-rates of different counties are to be explained in part by differences in the proportion of wives of reproductive ages within their boundaries, and partly by the different

proportions of young wives within those age limits. But, when these factors are taken into account, there still remain considerable unexplained differences, as is manifest on inspection of the table.

Illegitimate Births.—The illegitimate births numbered 42,189, being in the ratio of 4·8 to every 100 children born. This is very slightly higher than the proportion in the three preceding years, in each of which it was 4·7; but with these exceptions it was the lowest proportion yet reached, having only been equalled in 1875 (Table 13).

The following figures give satisfactory evidence of the gradual and continuous diminution of illegitimate births:—

	Children born out of Wedlock to 100 Births.
1846–50	6·7
1851–55	6·6
1856–60	6·5
1861–65	6·4
1866–70	5·8
1871–75	5·2
1876–79	4·7

The illegitimate rate varied very greatly in different counties; and it will be seen in Table 14 that those counties which had been distinguished by a high rate in former years retained their unfortunate pre-eminence in 1879.

It is manifest that, just as the legitimate birth-rate in a county depends in part upon the proportion of wives of reproductive ages living there to the total population, so also must the illegitimate rate depend, at any rate in part, on the proportion of unmarried women of reproductive ages. In order to exclude this cause of diversity, a table has been prepared showing the average annual illegitimate births in each county per 1000 unmarried women of from 15 to 45 years of age.

It will be seen (Table I.) that though this method in some cases, *e.g.*, Durham, Staffordshire, Derbyshire, modifies very considerably the order in which the counties come, as ascertained by the usual method, yet the county differences are by no means swept away, and the two lists remain on the whole much alike. In other words, the high rates of illegitimacy in some counties, and the comparatively low rates in others, are only very partially to be explained by differences in their respective proportions of unmarried women of child-bearing ages.

An examination of this table reveals a curious fact in regard to the geographical distribution of illegitimacy in the country. If an outline map of England and Wales be taken in which the county boundaries are distinguished, it will be found that a continuous, though irregular, line can

be drawn from the East Coast, where Essex and Suffolk are coterminous, across England to the Bristol Channel; and that while every county below this line, without exception, has an illegitimate rate below the average, every county above it, with only one exception, viz., Lancashire, has a rate above the average. Again it will be found that a second continuous line can be drawn from the same Eastern spot, right across England and passing between North and South Wales, and that while every registration county south of this line has an illegitimate birth-rate below 20·0 per 1000 unmarried women of from 15 to 45 years of age, every county north of it, excepting three, viz., Lancashire, West Riding, Cheshire, has a rate higher than 20·0. Thus England and Wales can be divided, and not very roughly, into three zones, a southern zone with an illegitimate rate below the general average, a midland zone with illegitimacy somewhat above the average, and a northern zone with excessively high illegitimacy.

In face of this strange and unexpected distribution, which seems too definite to be a mere chance occurrence, and yet does not appear to admit of explanation by assignable differences in social conditions, one is tempted to inquire whether there may not be local conditions, climatic or other, affecting the fecundity of women, and causing higher birth-rates in some parts than in others. If this were so, the legitimate birth-rates should be affected as well as the illegitimate, and should show corresponding variations. Are they so affected? Comparing the figures in Table G with those in Table I, we have the following results :—

Registration Counties.	Annual Illegitimate Births per 1000 Unmarried Women of 15–45 years of age.	Annual Legitimate Births per 1000 Married Women of 15–45 years of age.
The 17 Counties with illegitimate rates below average - -	13·2	285
The 14 Counties with illegitimate rates above average, but under 20·0 - - - - -	17·7	297
The 14 Counties with illegitimate rates above 20·0 - - -	22·6	309

It would therefore appear that, when the counties are thus grouped, there really is some agreement between the illegitimate and the legitimate rates; so far as that, in a group of counties where 1000 unmarried women give birth to a more than average number of illegitimate children, 1000 wives also give birth to a more than average number of legitimate offspring, and *vice versâ*. But though, when the facts are thus generally stated, the legitimate and illegitimate rates may be said to vary together, the proportions in which they vary in the three groups of counties are utterly different. If the legitimate rates varied in the same proportions as the illegitimate, which would be the necessary result on the hypothesis that the variations had one common cause, instead of being as they are in the proportions of 285, 297, 309, they would be in the proportions of 285, 382, 488. The hypothesis, then, that the curious geographical distribution of illegitimacy is explicable in more than the most trifling degree by some local condition, climatic or the like, affecting the fecundity of women, may be dismissed.

Among the differences in social conditions in different districts are two which might reasonably be expected to exercise a potent influence on the illegitimate rate; namely, the urban or rural character of the district, and the degree in which elementary education is diffused through the population.

As regards the effect of town-life, as opposed to country-life, it will be noticed that London and the immediately adjoining counties have the lowest rates of illegitimacy; and when to this fact is also added the further facts, that Warwickshire and, still more notably, Lancashire have exceptionally low rates, as compared with other counties in the same latitudes, it is impossible to resist the conclusion that such large towns as London, Birmingham, Liverpool, Manchester, exercise some influence by which illegitimacy is kept down; and as such towns can scarcely be assumed to be seats of exceptionally high morality, it is probable that the explanation lies in the fact, that the unrestrained passions which in other districts result in illegitimate offspring are in these large towns diverted into the channel of barren prostitution. Very possibly, were accurate statistics of this social evil procurable, the apparently contradictory evidence borne by some other districts, with populations in larger proportions of urban character, might find some explanation. Moreover, it is probable that a considerable proportion of illegitimate children are the offspring of country girls who have gone into domestic service in towns, and have there been seduced; and such girls will often return to the country for their confinement, and will thus increase the country rate of illegitimacy by the addition of births which from their origin should duly be reckoned as belonging to the towns.

As regards the effect of education on the illegitimate rate, it might be anticipated that ignorance on the part of women would make them fall easy victims to seduction; and statistics in some measure support this natural expectation, though perhaps not so fully as might have been supposed.

TABLE J.—ILLEGITIMATE BIRTHS in relation to EDUCATION, by Groups of Counties.

COUNTIES.	Annual Proportion of Signatures by Mark.	
	Per 100 Women Married.	Per 100 Men Married.
The 17 Counties with illegitimate rates below the average - - -	17·3	17·1
The 14 Counties with illegitimate rates above the average, but under 20·0 -	24·4	22·5
The 14 Counties with illegitimate rates above 20·0 - - - -	24·1	19·8

It will be seen that those counties, where the proportion of uneducated women is below the average, have also an illegitimate rate below the average; while those counties where uneducated women abound, have high rates of illegitimacy. But when these latter counties are subdivided, as in the table, into two groups, the anticipated correspondence between

ignorance in women and illegitimacy in children is wanting. There are, moreover, counties, and notably Westmorland, which stand high in the scale of female education, and yet have excessively high rates of illegitimacy. There is, however, another educational factor to be considered, viz., the amount of male education. It is quite possible that a wider diffusion of elementary education among men may lead to the same result as the ignorance of women; for education leads to prudence, and prudent men marry later than imprudent men; and late marriage is often preceded by illicit connections. The figures given in the above table lend support to this view; for the superiority of men over women in the matter of elementary education is very much greater in the group where illegitimate rates are highest than in either of the other groups.

Speaking generally, then, the recognisable influences which seem to have a tendency to increase the number of illegitimate births, in proportion to the number of unmarried women, are the absence of large towns; deficiency of elementary education among women; diffusion of elementary education among men. The curious geographical distribution of illegitimacy seems, however, hardly capable of explanation simply on this basis.

Sex.—The male births numbered 447,914, and were, as always, in excess of the female births, which amounted to 432,475; the proportions being 1036 boys to 1000 girls. It is curious that the excess on the side of male births is gradually lessening, as has been noted in previous reports. Only twice, namely, in 1868 and 1871, was the male excess lower than in 1879, and only on one other occasion, 1877, was it as low. (Table 13.)

Deaths.

The deaths registered in 1879 numbered 526,255, being 13,617 fewer than in the preceding year.

The death-rate was 20·9 per 1000 of the estimated population. On only four previous occasions had the rate been so low as this; namely, in 1845, when it also was 20·9; in 1850, when it was 20·8; in 1856, when it was 20·5; and in 1877, when it was 20·4, and the lowest on record.

The average annual death-rate for the ten preceding years (1869–78) was 21·8. Had the rate in 1879 been equal to this average, 22,349 persons who were alive at the end of the year would have died in the course of it.

It will be of interest to consider in what parts of the country, and in what season of the year this saving of lives occurred; which sex also and what periods of life were most favourably affected.

Localities.—The diminution of mortality, as compared with the previous average, was pretty general. In some few counties, however, the rate was above the previous average, and in some few others not below it. The registration counties with rates above their average were Suffolk, Wiltshire, Dorsetshire, Herefordshire, Leicestershire, Nottinghamshire, Derbyshire; the rate remained unaltered in London, Essex, Somersetshire, North Wales. In each of the remaining registration counties the rate fell. (Table 26.)

The death-rate in the urban districts was 22·4, while that in the rural districts was 18·8. The diminution, however, was much more considerable in the urban than in the rural parts; for in the former the rate was 5·9 per cent. below the previous 10-year average, in the latter only 2·1 per cent. The difference is still greater if comparison be made with 1878 instead of with the decennium, 1869–78; for the urban rate was 5·5 per cent. below that of 1878, while the rural rate only fell 1·1 per cent.

TABLE K.—URBAN AND RURAL DEATH-RATES, at successive Periods.

YEARS.	AVERAGE ANNUAL DEATH-RATES PER 1000 LIVING.		
	Urban Districts.	Rural Districts.	Rural Rates below Urban Rates.
In 4 years 1847–50 -	26·9	20·6	23·4 per cent.
In 10 years 1851–60 -	24·7	19·9	19·4 „
In 10 years 1861–70 -	24·8	19·7	20·6 „
In 8 years 1871–78 -	23·6	19·1	19·1 „
In the year 1879 - -	22·4	18·8	16·1 „

It is plain from this table that the Urban Districts have gained very considerably on the Rural Districts in point of healthiness; and also that 1879 was a year especially favourable to towns.

Sex.—Of the deaths in 1879, 271,496 were of males, and 254,759 were of females. The male death-rate was 22·2, and the female death-rate was 19·7, rates 4·3 and 4·1 per cent. respectively below the averages of the ten preceding years. Of equal numbers of each sex living, 113 males died to 100 females. It is worthy of notice that the mortality of males as compared with the mortality of females has been undergoing increase for many years past. Thus it will be seen from the following figures that from the commencement of civil registration until 1851–55 the mortality of males diminished as compared with that of females, but that the tide turned at that period and after a pause has continued to flow in the new direction ever since.

Deaths of Males to every 100 deaths of Females, of equal numbers living.

1838–40	-	108·7	1861–65	-	110·0
1841–45	-	107·2	1866–70	-	111·8
1846–50	-	106·6	1871–75	-	112·8
1851–55	-	107·8	1876–79	-	113·5
1856–60	-	107·8			

Ages.—Although the general death-rate in 1879, both of males and females, fell so much below the average, there was by no means a fall in the rate at each separate period of life. The saving was entirely in young lives; and the death-rate of persons in advanced life, so far from falling, was much above the average.

TABLE L.—DEATH-RATES in ENGLAND AND WALES at DIFFERENT AGES in 1879 compared with Decennial Averages.

1—5 - - -	32·5	30·4
5—60 - - -	9·8	9·1
60 and upwards -	71·1	77·9

* This proportion is to each 1000 births.

If we take a still longer period, on which to base our average, and break up the age-groups into still smaller sub-divisions, we shall find that the increased rate of mortality began at an earlier period of life than is shown in the above table, namely, at the 35–45 years period in males, and the 45–55 years period in females.

TABLE M.—ANNUAL RATE OF MORTALITY per 1000 Living in ENGLAND AND WALES at DIFFERENT AGES in the 28 years 1851–78, and in the year 1879.

AGES.	28 Years 1851–78.		Year 1879.		Excess or Defect per cent. in 1879 over or under the Average.	
	Males.	Females.	Males.	Females.	Males.	Females.
ALL AGES -	23·3	21·1	22·2	19·7	− 4·7	− 6·6
0—	72·1	62·3	63·9	53·5	−11·4	−14·1
5—	7·9	7·6	6·4	5·9	−19·0	−22·4
10—	4·5	4·5	3·4	3·4	−24·4	−24·4
15—	6·2	6·7	4·8	5·0	−22·6	−25·4
20—	8·4	8·0	6·5	6·1	−22·6	−23·7

It is a fact, which demands attention from those who are concerned in questions of public health, that while the mortality in early life has been very notably diminished, the mortality of persons in middle or advanced life has been steadily rising for a long period of years. It is true that in the records of the last four years (Tables 22, 24) some small degree of improvement upon the preceding quinquennium may be detected; but the improvement, though it may give hope that better times are coming, is very slight. Moreover, it is possible that the slight apparent improvement alluded to may be only apparent. For the death-rates at the several life-periods are calculated upon the hypothesis that the age-distribution of the estimated population remains as it was at the last census. But if there have been constantly increasing death-rates at the higher ages, and constantly diminishing death-rates at the lower ages, it is very possible that the age-distribution may have been altered in the direction of a larger proportion of young persons and a smaller proportion of older persons. In that case, the death-rates at the later life-periods, being calculated on too large an estimate of the numbers living at those periods, would be too small; and the death-rates at the earlier life-periods, being calculated on too small an estimate of the numbers living, would be too high. How far this possible cause of error may have been operative or whether it has been completely counterbalanced by the fact that larger numbers of survivors from the lower periods would have been transferred into the higher periods, and have made up for the losses due to their greater mortality, are questions which must await decision until the approaching census. It may, however, be mentioned that though similar changes in the death-rates at different life-periods were going on through the decennium 1861–70, yet the age-distribution of the population remained in 1871 much as it had been at the previous census.

Be this as it may, it is still unfortunately true that, if the value of a young life be now much higher than was the case twenty-five years ago, the value of a life after about the age of 35 for men and of about 55 for women is notably smaller than it was.

To what causes this increase in the death-rates at the later periods of life is due, is a question, as already said, which it behoves those concerned with Public Health administration to consider. All that can be done in this Report is to call attention to the fact. At the same time it may be advisable to notice some of the hypotheses which may be suggested as explanations, in order to consider how far such statistics as can be furnished by the General Register Office can be made to furnish evidence as to their relevance or adequacy.

That the sanitary efforts made of late years should have more distinctly affected the mortality of the young is only what might be naturally anticipated; for it is against noxious influences to which the young are more especially sensitive that the weapons of sanitary reformers have been chiefly directed. But that the mortality of older persons should not merely be less favourably affected, but be actually affected unfavourably, is what no one would have expected.

Yet it has been suggested that it is to sanitation that the increased death-rates of persons after a certain age should be referred. A vast number of children of permanently unsound constitution, are, it is said, now saved from death by sanitary interference. These grow up to adult life, and by their presence diminish the average healthiness of the adult classes, and so add to their death-rates. That sanitation, using this term in a wide sense, must in truth exercise some influence of this kind, may probably be admitted. The question, however, is how extensive this influence would be; whether there are not other influences of opposite action which would counterbalance its effects; and whether any statistical evidence on the question is to be had.

In the first place, then, it must be remembered that sanitation, though its chief operation may be the preservation of young lives, does also, if

in a less degree, act directly as a preservative of persons more advanced in life. For fevers and other preventible causes of death are by no means exclusively confined to the young. Secondly, if it be true, as would seem to be the case, that sanitation preserves a number of sickly children from death, and so adds a contingent of weakly members to the adult population, it is also true that it prevents a number of children, who, under the old regime, would have had their strength broken and have grown up into weak adults, from undergoing this physical deterioration, and, therefore, will also add a contingent of healthiness to the adult ranks. Thirdly, if sanitation acted in the alleged manner, its visible effects should increase year after year, in proportion to the time it had been in operation, and to the energy with which it had been carried out. Yet, as a matter of fact, it would appear that in the last four years, when its effects should be most conspicuous, there has been an apparent diminution in the supposed effects; or at any rate, allowing the possible cause of error before-mentioned to exist, no increase in them. Lastly, as we have seen, the increase in the death-rate does not occur at all until the 35–45 years period in males, and not distinctly until the next decennium, and not until a still later period in females. It seems difficult to believe that the supposed cause, which acts by weakening the average vitality of adults at all ages, should be so late in its statistical manifestation, and should affect the two sexes so differently in the matter of time. For these reasons the proposed explanation, which refers the increased death-rates at certain later periods of life to the indirect effects of sanitation, seems scarcely an adequate one. Allowing, however, the explanation to be a true one, it must be admitted that a system which adds some 30 to 35 years to the duration of a large number of male lives, and some 50 or more years to that of a large number of female lives, is good and effective. For deplorable as it is that persons should die at the comparatively early ages of 35 or of 50 years, it would be still more deplorable in general estimation that they should die in childhood.

Another hypothesis would seek an explanation of the increased death-rates of adults in an increased abuse of alcohol and in an extended prevalence of other vicious indulgences. Our vital statistics give unfortunately very insufficient means of testing the adequacy of this explanation. A very small proportion indeed of the deaths which are in reality due to alcoholism or to syphilis are directly ascribed to those causes in the certificates. Unless the primary cause of death be very distinctly marked, or of very recent date, it is almost invariably ignored, and the death ascribed to local disease of that organ—brain, heart, lung, liver, or whatever it may be,—which has been secondarily affected. Although, therefore, there are headings in our tables both for alcoholism and for syphilis, the figures under them give but little help in estimating the actual prevalence of these diseases. It may, however, be said that though it may be impossible, for the reasons assigned, to state the absolute mortality from these causes, yet that it may be fairly presumed that the same percentage of their actual mortality will each year be referred to them in the certificates, and that consequently a comparison of the returns made year after year under these headings would give a true measure of the increasing or decreasing prevalence of these widespread causes of decay. This is of course in some measure true. But it must be remembered that there has been a distinct improvement going on for many years in the accuracy with which causes of death are certified; not only because the advance of medical knowledge renders diagnosis more precise, but also, it may be hoped, because the importance of giving true certificates is getting to be somewhat more generally recognised. The consequence of this is that the proportion of deaths assigned to definite causes is continually increasing at the expense of those ascribed to ill-defined causes, or to none at all. This is shown in the following table, which gives the proportion of deaths, per million from all causes, referred at successive

periods to "ill-defined or not specified causes." The differences between the successive periods would be still more striking were the deaths from such vague causes as debility, atrophy, and the like, taken into account. As it is, however, it will be seen that the proportion of deaths from ill-defined causes has fallen since 1851–60 by nearly 78 per cent., and that the fall has been a gradual one.

TABLE N.—PROPORTION to 1000 TOTAL DEATHS of DEATHS from ILL-DEFINED OR NOT SPECIFIED CAUSES.

PERIODS.	Deaths from All Causes.	Deaths from ill-defined or not specified Causes.	Proportion not specified per 1000 deaths.
10 years 1851–60 -	4,210,715	74,842	18
5 years 1861–65 -	2,331,957	24,505	11
„ 1866–70 -	2,462,541	21,424	9
„ 1871–75 -	2,572,749	18,132	7
4 years 1876–79 -	2,076,938	7,438	4

It must not therefore be assumed that, because the deaths referred to a given disease are found to have been growing more and more numerous year by year, there must necessarily have been any corresponding increase in its actual mortality; and especially is this caution necessary, when the numbers referred to the heading are small, as is the case with syphilis and still more with alcoholism. With this warning as to the uncertainty attaching to these figures, we may now give them, such as they are. Delirium tremens, intemperance, and gout have been taken as representing the consumption of alcohol, and the following are the deaths ascribed to these diseases.

TABLE O.—MORTALITY from DELIRIUM TREMENS, INTEMPERANCE, and GOUT, in various quinquennial Periods.

—	AVERAGE ANNUAL DEATHS PER MILLION LIVING.					
	1850–54.	1855–59.	1860–64.	1865–69.	1870–74.	1875–79.
Delirium Tremens -	28·6	25·6	23·8	21·8	16·4	16·4
Intemperance -	17·8	15·2	16·2	18·2	17·8	28·2
Gout - - -	12·4	13·2	13·4	18·2	20·8	25·6
Total from the above three Causes -	58·8	54·0	53·4	58·2	55·0	70·2

There has thus been a considerable increase in the deaths referred to these causes taken together in the last five years, a fact, be it noticed, which is in harmony with the view suggested by Dr. Farr (cf. 39th Ann. Rep., pp. 228–229) that it is adversity and not prosperity that leads to excess in drink; but, excepting in the case of gout, there has been no gradual increase of mortality at each successive quinquennium, corresponding to the quinquennial increments in the general death-rates at the later periods of life. Moreover, the period (1875–79) in which the mortality from

alcoholic causes reaches its maximum is actually the period in which, as before noted, there has been an apparent ebb in the rising death-rates of persons in middle or advanced life. The death returns, then, give no support to the hypothesis which would find the cause of increased adult mortality in increased consumption of alcohol.

Passing from the statistics of alcoholism to those of syphilis, we have a choice of two sets of figures; those which give the annual death-rates from this assigned cause per million living at all ages, and those which give the proportion of infantile deaths ascribed to it per million births. The latter are the better. For though we are considering the possible cause of the increased death-rates of adults, the infantile death-rate from syphilis, if correctly given, would be a fair measure of the adult condition, to which the inherited constitutional taint was due. Moreover, the infantile cases would, on account of the less difficult diagnosis and for other causes, be more likely to be correctly certified than would the adult; indeed a large proportion of the deaths ascribed to syphilis are deaths of children under one year of age. Both sets of figures, however, tell in the same direction; and, if they are to be trusted, there has been a steady increase in the ravages of this formidable disease.

Table P.—Deaths ascribed to Syphilis at successive Periods.

Periods.	Average Annual Deaths ascribed to Syphilis.	
	Proportion of Deaths at all ages per Million living.	Proportion of Deaths among Infants under One Year of age per Million Births.
1851–55 - - -	41·2	738
1856–60 - - -	51·8	1033
1861–65 - - -	68·6	1346
1866–70 - - -	83·2	1693
1871–75 - - -	82·4	1716
1876–79 - - -	86·0	1768

Taking the year 1879 by itself there was some improvement; for the death-rate from this disease at all ages fell to 81; and the infantile rate to 1696.

Seasons.—The deaths in 1879 were very unequally distributed in time, the rate having, as usually, been highest in the first quarter and lowest in the third. But while the rate in the first quarter was actually above the decennial average, the rate in the third was nineteen per cent. below it.

Table Q.—Mortality in relation to Seasons.

——	Annual Death-rates per 1000 living in the Quarter ending the last day of			
	March.	June.	September.	December.
1869–78 - -	24·1	21·2	20·3	21·9
1879 - - -	25·1	21·0	16·4	21·2

The high mortality in the first quarter was due to the excessive cold, the mean temperature having been in January 6°·8, in February 1°·2, and in March 0°·4, below the average of the corresponding quarter in 38 years; while the very low mortality of the third quarter was due to the absence of excessive heat, the summer having been cold, wet, and sunless throughout, reducing the mean temperature in July to 4°·1, in August to 1°·6, and in September to 0°·8, below the average. With the single exception of 1814, the year 1879 was the coldest in the century. Such a year is far more favourable to the young than to the old; for, speaking generally, cold is the scourge of the aged, while heat is the great enemy of the young.

That the death-rates of children and young persons should have been lower than usual, and that those of older persons should have been high, as was the case, is therefore only what might have been anticipated. It is manifest, however, that this is but a partial explanation of the altered rates alluded to in the previous section; for such alteration has been going on for many years, independently of the meteorological characters of successive years.

Deaths in Public Institutions.—On pages 99 to 120 of the abstracts will be found a return of the deaths recorded in most of the public institutions during the year 1879, thus affording the means for correcting the rate of mortality for the year in registration districts and sub-districts. Public institutions, for the purposes of this return, include workhouse establishments, hospitals, and infirmaries, and all lunatic asylums receiving pauper inmates; prisons and private lunatic asylums not being included. The deaths recorded in these public institutions during 1879 were 52,982, equal to 10·1 per cent. of the total deaths in England and Wales; of these, 35,180 occurred in workhouse establishments, 12,675 in hospitals, and 5,127 in public lunatic asylums. The numbers of deaths in workhouses and lunatic asylums exceeded the corresponding numbers in 1878, while the deaths recorded in hospitals were less numerous. The proportion of deaths recorded in workhouse establishments was equal to 6·7 per cent. of the total deaths, showing an increase upon the proportions prevailing in recent years. The proportions of deaths of in-door paupers ranged in the eleven registration divisions from 2·9 per cent. in Monmouthshire and Wales, to 11·6 per cent. in the Metropolis. The number of public institutions in the list is 1481, including 726 workhouses, 669 hospitals, and 86 lunatic asylums; each of these numbers showed an increase upon those in the list for 1878. To total deaths of each sex, the deaths of males are proportionally much more numerous in public institutions than those of females; the percentages in 1879 were 11·7 and 8·3 respectively. The proportion of male deaths was larger than that of females in all three classes of institutions, the excess being relatively largest in hospitals. Three per cent. of the total deaths of males occurred in hospitals during 1879, while the percentage of female deaths did not exceed 1·8.

Registered Causes of Death.—It has now been shown that the low death-rate in 1879 was due to a diminution of mortality that was much greater in the urban than in the rural districts, and much greater in the summer than in any other season; and that the decline was exclusively confined to persons in the earlier periods of life.

It remains to consider under what headings, among the causes of death, the saving was effected. We shall find that the results of this inquiry are such as might be anticipated, and that the saving was chiefly effected in those diseases which are known to be more fatal in towns than in country, or in summer than in winter, or to attack the young more than the aged.

The assigned causes of the 526,255 deaths were distributed in the several classes, as follows :—

TABLE R.—MORTALITY FROM THE VARIOUS CLASSES OF DISEASES.

—	Deaths, 1879.	Rate per Million.	
		In the Year 1879.	Average in the 10 Years 1869–78.
Zymotic diseases - - -	81,274	3,239	4,565
Constitutional diseases - - -	88,836	3,541	3,761
Local diseases - - - -	259,656	10,348	9,421
Developmental diseases - - -	74,643	2,975	3,256
Violent deaths - - - -	17,635	703	756
Sudden deaths (cause not ascertained) -	2,656	106	128
Causes not specified or ill-defined -	1,555	*	*
Total - - -	526,255	20,912	21,887

* The deaths from causes "not specified or ill-defined" are distributed proportionately over all the specified causes in calculating the rate.

Thus in each class of causes, with the exception of Local Diseases, to which heading, however, one half of the total deaths were referred, there was a considerable diminution of the rate in 1879 as compared with the preceding decennial average.

Zymotic diseases.—The most notable decrease was in this class, where the fall was no less than 29 per cent. The fall was in the miasmatic sub-division. Almost every one of the diseases in this sub-division had a rate below the average, and in no fewer than eight of them the rate was the lowest on record in the last 30 years. Those eight were small-pox, typhus, enteric fever, simple continued fever, dysentery, diarrhœa, cholera, and croup.

The deaths from small-pox were only 536, and of these, 450* occurred in London. The present outbreak began in 1876, its continuity, however, with the great outbreak of 1871–2, being maintained by a considerable local outbreak at Birmingham in the intervening years. The 1876 outbreak fell almost exclusively upon four of the 20 large towns—London, Liverpool, Manchester, Salford ; but, while in the three last-mentioned towns it exhausted itself in two years, its progress was slower in London, so that it continued its ravages through 1879, and at the close of the year was still not quite extinct. (Table 52.)

There can be no doubt that the main cause of these outbreaks of small-pox is neglect of vaccination ; and from information supplied by various registrars there is reason to believe that it is becoming no uncommon thing for a parent, in order to evade the Vaccination Acts, either not to register the birth of a child at all, or to give the registrar a false address. What numbers of the children, or persons generally, who die of small-pox owe their deaths to such violation of the law, it is impossible to say with exactness ; for in the three years 1877–9 in a very large proportion of fatal cases, 28·2 per cent. in London, and 54·3 per cent. in the rest of all

* 450 is the number in the complete year, January 1st to December 31st ; the number 458 given in Table 52 relates to 53 weeks ending January 3rd 1880.

England and Wales, the medical attendant was either unable, or neglected, to state in the certificate whether the deceased had been vaccinated or not. But, confining ourselves to those cases in which the necessary information is given, it appears that 64·5 per cent. of the persons who died of small-pox in England and Wales in these three years were unvaccinated, and only 35·5 were vaccinated. Had the necessary information been given in all cases, the percentage of unvaccinated deaths would doubtless have been much higher; for the fact of non-vaccination is much harder to establish than the fact of vaccination.

In London 65·4 per cent. of the fatal cases, concerning which the necessary information was forthcoming, were unvaccinated, while in the rest of England and Wales, the percentage was 61·6.

This, however, does not necessarily imply that a larger proportion of persons were unvaccinated in London than elsewhere; the difference might possibly be due to better and more efficacious vaccination in London, owing to which a smaller proportion out of the vaccinated was liable to infection.

TABLE S.—DEATHS FROM SMALL-POX, 1877–78–79.

——	Vaccinated.	Unvaccinated.	No statement as to Vaccination.
LONDON - - -	1,097	2,073	1,248
Rest of ENGLAND AND WALES - - -	396	634	1,222
All ENGLAND AND WALES - -	1,493	2,707	2,470

The deaths from diarrhœa numbered 10,948, and were in the proportion of 435 per million persons living. This was the lowest rate on record for 30 years. Only once, namely in 1860, was a rate at all approaching it attained, and the rate in that exceptional year was 494. The average annual rate for the 30 preceding years was 893, the lowest in any of those years having been, as stated, 494, and the highest 1388, which was the rate recorded in 1868. The remarkably low rate of 1879 was due to the excessively low temperature of the summer months and indeed of the whole year, which, with the single exception of 1814, was the coldest in the century. How important a factor temperature is in the generation of diarrhœa is shown in a marked degree by comparing the mortality from this disease in the cold year 1879 with that in the warm year 1878, two years which owing to their continuity can have differed in no appreciable degree so far as the factor of sanitation is concerned. The deaths, then, from diarrhœa were 13,514 more in 1878 than in the next year, and the difference would be still greater were dysentery and cholera included in the comparison. This is the penalty we pay for having a warm and pleasant year in place of a cold and gloomy one; a penalty redeemed, however, in some measure, by a saving under the heading of pulmonary disease.

It is only since 1869 that the deaths from typhus, from enteric fever, and those referred to the vague heading simple continued fever, most of which are probably enteric, have been separated from each other in our Reports. From that time onwards, the deaths under each of these three headings have almost continuously diminished, year by year, and in 1879 each class of fever was at its minimum. With them also has fallen remittent

fever, which, in the majority of cases referred to it in this climate is doubtless but an alias for enteric fever. Had the deaths from one or more of this group of causes fallen, while those from others in the same group had risen; or had the fall been trifling; or the totals dealt with insignificant in amount; it might have been suspected that the alteration was a mere alteration of name. But as the deaths under each heading have declined; as the fall in the death-rate from them has been enormous, 62·4 per cent. in the course of ten years; and as the totals are by no means small; it may be accepted as an indisputable fact that there has in truth been a notable decline in these pests, and it may be fairly assumed that the decline is due to improved sanitary organisation. The deaths from these causes, per million persons living, were 850 in 1869, and only 320 in 1879.

The deaths ascribed to croup were in the proportion of 142 deaths to a million persons living, being the lowest ratio in our records. The term "croup" is doubtless used with some vagueness in certificates, and the deaths referred to it have been diminishing for some years past, probably owing to greater precision in giving certificates. The deaths ascribed to it have a tendency to fluctuate with the mortality from diphtheria and from scarlet fever.

The mortality from each of the eight zymotic diseases, as yet discussed, was in 1879 at its minimum. The death-rates from scarlet fever and from measles, though not actually the lowest recorded in the past 30 years, were yet considerably below the average; nor was there any notable increase under any other heading in this group of diseases to counterbalance these life-gains. In short the year 1879 was remarkable for its exceptional immunity from miasmatic disease.

Constitutional diseases.—The deaths ascribed to these diseases were also considerably below the average, the annual rate per million living having fallen from a decennial average of 3761 to 3541. The deaths from gout, however, were in excess, as already mentioned, and at their maximum. Cancer also maintained the increased rate to which it has been gradually mounting for many years; but how far this apparent increase is simply due to improved diagnosis, and how far to a real augmentation, is doubtful.

The same doubt exists in the case of deaths from tubercular diseases, which have been gradually decreasing, according to the registers, until in 1879 they reached their minimum, namely 2806 deaths to a million persons living. That much at any rate of the apparent decrease is due to altered use of names can hardly be doubted, when it is seen that, as the deaths ascribed to tubercular diseases fall, those ascribed to lung diseases go up, so that the sum of the two shows no progressive decrease. Moreover in that division of the country, Wales, where the recorded death-rate from phthisis or consumption is habitually the highest, the death-rate from lung diseases is habitually one of the lowest.

TABLE T.—ANNUAL MORTALITY from TUBERCULAR DISEASES and DISEASES OF THE LUNGS, in successive periods, PER MILLION LIVING.

—	30 Years	Periods of 5 Years.						1877.	1878.	1879.
	1850–79.	1850–54.	1855–59.	1860–64.	1865–69.	1870–74.	1875–79.			
Tubercular Diseases - -	3,289	3,655	3,448	3,368	3,326	3,018	2,921	2,885	2,968	2,806
Diseases of Organs of Respiration - - -	3,395	2,769	3,155	3,409	3,418	3,614	4,006	3,620	3,906	4,420
TOTAL - -	6,684	6,424	6,603	6,777	6,744	6,632	6,927	6,505	6,874	7,226

Local diseases.—The deaths ascribed to this class of diseases were 259,656, giving a rate of 10,348 per million persons living, against an average annual rate of 9422 for the preceding decennium.

The increase occurred among Diseases of the Organs of Respiration, of Circulation, and of the Urinary Organs. The mortality from diseases of the respiratory system was at the rate of 4420 per million living, against an average of 3738 for the preceding decennium. Part of this increase, as already pointed out, was probably simply due to altered nomenclature, and especially to many deaths which in former years were ascribed to tubercular disease being now ascribed to bronchitis, pneumonia, and the like. But, independently of this, there was doubtless a real increase; for the sum of the headings (Table T.) was much higher in 1879 than in former years, and as compared with 1878 gave a rate per million of 7226 against 6874. This increased mortality is accounted for by the exceptionally cold weather which prevailed throughout the year.

The mortality from diseases of the Organs of Circulation gave a rate of 1499 per million, against 1265 as the previous decennial average; and the mortality from Urinary diseases a rate of 442, against an average of 378.

The deaths ascribed to these causes have been gradually increasing for many years, and reached their maxima in 1879. It can scarcely be doubted that here also the increase has been in great measure only apparent, and due to transference from the vague headings "Dropsy," "Sudden Death," "Old age," each of which shows gradually decreasing figures, so that the sums of the rates from all these causes scarcely differ from period to period.

TABLE U.—AVERAGE ANNUAL DEATHS PER MILLION LIVING.

It will be seen, however, that even when full allowance has been made for altered nomenclature, there still remains a not inconsiderable increase in the mortality in 1879 from these causes, and that the sum total of their rates in that year was at a maximum. The cause was doubtless the same as that which raised the death-rate from lung disease, namely the exceptionally cold weather, to which many old persons, and many who were suffering from impaired circulation would naturally succumb.

Developmental diseases.—The deaths from this class of causes were 74,643, and the rate per million living was 2,975, being a considerable fall from the average of the 10 preceding years, which was 3,256. This fall was mainly due to a large decrease under the vague heading "Atrophy and Debility." The annual deaths per million ascribed to this cause averaged 1491 in the quinquennium 1865–9; since which time it has steadily fallen, until in 1879 it was only 986.

The deaths ascribed directly to childbirth were 1876, and those ascribed to puerperal fever or metria were 1464. These together give a death-rate of 3·8 mothers to 1000 children born alive, or one death to 264

confinements. This rate was identical with the average of the two immediately preceding years, but lower than that of any earlier record (Table 46.)

Violent deaths.—The deaths from violence were 17,635, and lower in proportion to the population, than in any of the last 30 years. But while Accident and Homicide were each at its minimum, Suicide was on the contrary at its maximum. The increase of suicidal and the diminution of accidental deaths may very possibly have had a common cause, namely, the industrial depression. That this would tend to promote suicide can scarcely be questioned; and that it would also tend to diminish accidents is no less evident. For the main heading under which accidental deaths are registered is "Fractures and Contusions;" and of these the great bulk occur in industrial occupations, many of which were in 1879 more or less at a standstill. The cold and dismal character of the year will also have operated in the same direction. For, though it appears that the commonly spread belief in the tendency of gloomy weather to promote suicide is not tenable, yet that such weather will diminish accidents is indisputable. For, after fracture, the most common form of fatal accident is by drowning; and the aquatic amusements, bathing and boating, must in so cold a year as 1879 have been in comparative disuse. It is in accordance with this view, that on analysing the accidental deaths we find that the diminution was under these two headings, "Fractures" and "Drowning," while the deaths from "Burns and Scalds" and "Suffocation," causes no less operative in cold than in warm seasons, remained without reduction.

TABLE V.—DEATHS PER MILLION LIVING, from ACCIDENT and SUICIDE.

Certification of the causes of death.—Until the end of 1874, it was optional with medical practitioners to furnish a certificate of the cause of death of a patient in order that its contents might be inserted in the column of the Death Register. The Births and Deaths Registration Act of 1874, however, which came into operation on 1st January 1875, made it compulsory upon registered medical practitioners to furnish a certificate of the cause of death of each patient attended during his or her last illness. In section 20 of this Act will be found the following clause:— "In case of the death of any person who has been attended during his "last illness by a registered medical practitioner, that practitioner shall "sign and give to some person required by this Act to give information "concerning the death, a certificate stating to the best of his knowledge "and belief the cause of death, and such person shall, upon giving "information concerning the death, or giving notice of the death, deliver "that certificate to the registrar, and the cause of death as stated in that "certificate shall be entered in the register, together with the name of

"the certifying medical practitioner." It is further provided in another clause of the same section that:—"Where an inquest is held on the body "of any deceased person, a medical certificate of the cause of death need "not be given to the registrar, but the certificate of the finding of the "jury furnished by the coroner shall be sufficient." It follows, therefore, that the cause of death is now certified by a registered medical practitioner in every case in which the deceased person has been attended in his last illness by such a practitioner, and by the coroner in inquest cases. In a certain number of cases, however, the proportion of which is fortunately now declining, persons receive no kind of medical attendance during their last illness, or are attended by unqualified, or at any rate unregistered medical practitioners; the law makes no provision for the due certification of the cause of such deaths, and as all deaths must be registered, the Registrar General instructs registrars that "the "non-production of any certificate or written statement of the cause of "death will not justify a Registrar in refusing to register the death, "except when a registered medical practitioner was in attendance, or "where the death was sudden, or was occasioned by violence, or occurred "under suspicious circumstances, in all of which latter cases notice must be "given to the coroner, previous to registration." Further:—"Whenever a "certificate, or any written statement of the cause of death, signed by an "unregistered practitioner is produced by an informant, whether such "practitioner be qualified or not, such certificate must be regarded by the "Registrar merely as part of the information tendered by the informant, "* * * * * * and the name of the person signing such document must "not be recorded in the Register." The deaths, therefore, in which the causes are duly certified, include all those cases in which registered medical practitioners have been in attendance upon the deceased persons during their last illness, and all inquest cases; in all such cases the name of the certifying registered practitioner or coroner, as the case may be, is entered in the Death Register. The causes of all other deaths are treated as uncertified, whether the deceased persons have been attended in their last illness by a qualified but unregistered practitioner, by an unqualified and irregular practitioner, or by no medical practitioner.

During the year 1879, the causes of 474,973 or 90·3 per cent. of the 526,255 registered deaths were certified by registered medical practitioners; and of 26,559 or 5·0 per cent. by coroners. The causes of the remaining 24,723, or 4·7 per cent. of the total deaths, were not duly certified; but the death register does not show in what proportion of these uncertified cases the deceased persons had been attended in their last illness, by qualified but unregistered practitioners, or by unqualified and irregular practitioners, or had received no kind of medical attendance. The proportion of uncertified causes of death varied very considerably in different parts of England and Wales; in the Metropolis in 1879 it did not exceed 1·4 per cent., whereas in the rest of the country it averaged 5·3. In Wales the percentage was so high as 13·3; this high proportion is probably in great measure due to the sparseness of population and the nature of the country, which place considerable difficulty in the way of obtaining medical attendance in illness. In the several English registration counties, excluding the metropolitan counties of Middlesex and Surrey, the proportion of uncertified causes of death to total deaths in 1879 ranged from 1·2 and 2·0 in Wiltshire and Berkshire, to 6·2 in Derbyshire, 6·3 in Norfolk and Huntingdonshire, 6·5 in Rutlandshire, 6·6 in Yorkshire and Shropshire, 7·5 in Durham, 8·0 in Westmorland, 8·3 in Cumberland, 9·3 in Monmouthshire, 9·8 in Herefordshire, and 10·1 in Cornwall. The large proportion of uncertified causes of death in the mining districts is probably to a great extent due to the independent practice of the unqualified assistants of registered medical practitioners. It is needless to say that the large proportion of uncertified deaths in many parts of England

and Wales detracts much from the value of the Death Register as the basis of mortality statistics.

Progress of Registration.

During the year 1879 no fewer than 1,770,808 names were added to the printed alphabetical indexes of births, deaths, and marriages in England and Wales. At the close of the year the aggregate number of names in the indexes, which embrace a period of 42½ years, from the middle of 1837 to the end of 1879, was 61,240,443. The accompanying table shows the marked increase in the number of searches at the Central Office, and also in their proportion to names in the indexes, since 1850. The figures in this table do not include the searches in the non-parochial registers. The total number of searches in 1879 (including those in non-parochial and other records) was 29,690, and the number of certificates issued was 24,000. The amount received as fees for searches and certificates in the year 1879 and paid into Her Majesty's Exchequer was 4517*l.* 15*s.*

For a list of the various public registers and records at this office, see the Registrar-General's 34th Annual Report, pp. xxi–xxii and pp. xxv–xxvi.

Mortality of the Army.

From returns with which I have been favoured by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad in the year 1879 was 191,290, and that the number of deaths was 4239; so that the rate of mortality was 22·2 per 1000, against 11·2 in 1878, and 9·5 in 1877.

The average strength of the Army at home was 88,215, and the deaths were 796; while the average strength of the Army abroad was 103,075 and the deaths were 3443. The death-rate at home was therefore 9·0 per 1000, and the death-rate abroad 33·4.

TABLE X.—ANNUAL RATE of MORTALITY per 1000 among OFFICERS and NON-COMMISSIONED OFFICERS and MEN in the ARMY AT HOME and ABROAD, 1861–79.

YEARS.	AT HOME.		ABROAD.

MORTALITY OF THE NAVY.*

The total force in the service afloat in 1879, corrected for time, was 44,745. The deaths were 384, and of these 279 were due to disease, and 105 to violence. The deaths from violence were far below those in the previous year, when the mortality was abnormally increased by the loss of the "Eurydice." If the loss due to that exceptional incident be omitted, the death-rates from violence differed but little in the two years; in 1878 the rate was 2·39, and in 1879 it was 2·35 per 1000. The death-rate from disease was 6·23 against 5·32 in 1878, and 4·92 in 1877. The death-rate from all causes was 8·58, against an average rate of 10·38 for the preceding 10 years.

The assigned causes of the 384 deaths were as follows:—

Eruptive fevers - -	14	Diseases of—	
Continued fevers -	25	Urinary and generative system - -	8
Yellow fever - -	9	Organs of locomotion -	3
Paroxysmal fevers -	16	Cellular or cutaneous system - -	1
Cholera - -	2	Debility - - -	4
Other febrile diseases -	1	Alcoholic poisoning - -	4
Rheumatism - -	5	Opium do. - -	1
Syphilis - -	1	Drowning - - -	45
Tubercular diseases -	45	Falls from aloft - -	17
Other constitutional diseases - - -	2	Fractures - - -	12
Diseases of—		Suicide - - -	7
Nervous system - -	29	Other violent deaths -	24
Circulatory system -	24		
Respiratory system -	44		
Digestive system - -	41	All causes - -	384

There was, as always, much difference in the mortality at different stations.

* The facts in this paragraph are taken from Mr. J. N. Dick's report to the Director General of the Medical Department of the Navy.

* Including 311 deaths by the loss of Her Majesty's ship "Eurydice."

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—By the Registration Act of 1874, commanding officers of British ships not in Her Majesty's Service, and of foreign vessels trading to or from any port in the United Kingdom are required, under a penalty, to transmit returns of all births and deaths, occurring on board, to the Registrar General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, Scotland, or Ireland according to the nationality of the subject; returns of a similar character are also received from commanding officers of Her Majesty's ships. The certified copies of births and deaths of English subjects thus transmitted to me constitute the "Marine Register Book," the numbers recorded in 1879 being 357 births and 4265 deaths.

Among *passengers* on board merchant vessels at sea (Table 97.) 344 births, and 776 deaths occurred. This was a considerable increase upon the numbers recorded in 1878, and may very probably have been due to the large increase in the number of emigrants.

Mercantile Marine.—The Registrar General of Shipping and Seamen reports* (Table 98.) that the number of mariners at sea in registered vessels in 1879 was 193,548. The deaths from all causes (excluding the deaths of masters) numbered 3692, the rate of mortality being 19·0 per 1000 of strength, against an average annual rate of 23·2 for the last 28 years.

In the subjoined table the mortality in the merchant service by drowning is compared with the mortality in the Royal Navy from the same cause.

* The return of deaths contains some of the cases of deaths in British colonial ships; it contains also many, if not most, of the cases of men who die abroad after their discharge sick from British ships, but not the cases of men who die under similar circumstances in the United Kingdom.

NOTE.—In the above Table some of the deaths on board colonial and fishing vessels are included, whereas the strength relates only to the registered vessels of the United Kingdom.

* The numbers of deaths in the above Table are not those which actually occurred during each year, but represent those "*reported*" in each year.

† Including the deaths by the loss of Her Majesty's ships "Captain" and "Slaney."

‡ Including 311 deaths by the loss of Her Majesty's ship "Eurydice."

EUROPEAN STATES.

In Tables 98–111 will be found international vital statistics relating to certain of the chief European States, published in accordance with a resolution of the Statistical Congress held at St. Petersburgh in 1872. Table 98 affords the means for comparing the marriage, birth, and death rates in each State in a series of years, with the mean rates in the series. Detailed returns for each State will be found in the other Tables.

The *marriage rate* in 1879 showed a general depression throughout the European States. Judged by the mean rates during the period for which the information is available the marriage-rate varies very considerably in the different countries. The lowest mean annual rates were 13·6 in Sweden, 14·6 in Belgium, 15·1 in Spain, and 15·2 in Italy; the rates ranged upwards in the other countries to 17·2 in Austria, 17·7 in the German Empire, and 21·0 in Hungary. The mean rate in England and Wales during the twenty years 1860–79 was 16·6.

The *birth-rate* in the different States varies in almost constant relation with the variations of the marriage-rate. The annual birth-rate in France, however, averaged but 26·0 per 1000 in the nineteen years 1860–78, and was very considerably lower than the rate in any other European State, although the marriage-rate was higher than those in six of the States. The mean birth-rates in the other States ranged upwards from 31·2 in Denmark and Sweden, 31·6 in Switzerland, and 31·7 in Belgium, to 39·8 in the German Empire, 39·9 in Austria, and 42·6 in Hungary. The mean birth-rate in England and Wales occupies a position about half way between the low rates and the high rates, being 35·4 per 1000.

The *death rates* in the various European States show a wider range than either the marriage or birth-rates. In Sweden and Denmark the mean annual death-rate did not exceed 19·2 and 19·7 respectively; the next lowest mean rates were 22·0 in England and Wales, and 22·7 in Belgium, and France follows closely with 23·6. The mean rates were 24·0 in Switzerland, 24·6 in the Netherlands, and 27·0 in the German Empire. The rates in the more southerly countries show a marked excess: Spain during the ten years 1861–70 had a rate of 29·7, while the mean rate in those years for which the information is available is 29·9 in Italy, 30·8 in Austria, and 39·0 (in the twelve years 1866–77) in Hungary. The two extreme rates of 19·2 in Sweden and 39·0 in Hungary imply that in an equal number of persons living in the two countries, the deaths in Hungary were as 203 to 100 in Sweden; and if these respective rates prevailed in two stationary populations, they would indicate a mean duration of life of 52 years in the former case, and of only 26 in the latter. With such a death-rate, the result of the recent Hungarian Census, showing that the number of the population has been almost stationary during the past ten years, need cause no surprise.

I have the honour to be,
Sir,
Your faithful servant,
BRYDGES P. HENNIKER,
Registrar-General.

Remarks on the Meteorology of the Year 1879.

By James Glaisher, Esq., F.R.S., &c.

The year 1879 was remarkable for its low temperature, particularly in January, November, and December, when the weather was inclement; the spring and summer were cold and wet. There was an unusual amount of cloud during the year, and consequently very little sunshine. Until the end of September the readings of the barometer were generally below the average, and rain was in excess during these months, excepting March, which was dry. Snow fell very frequently, and fog was unusually prevalent. The temperature of the whole year was the lowest in this century, excepting only that of 1814, and it was a bad one for agricultural work.

Till September 24th the reading of the barometer was generally below its average, the exceptions being the 17 days ending February 1st; the 14 days ending March 14th; the 28 days ending May 25th; the eight days ending July 30th, and the five days ending September 4th; the average daily excess of these 72 days was 0·17 inch., and the mean daily defect below the average of the remaining 195 days was 0·23 inch. From September 25th to the end of the year, with the exception of a few days, the reading was high, and the average excess of daily pressure for these 98 days was 0·28 inch. Thus the readings of the barometer were low for the first three quarters of the year, and high during the last quarter. The lowest reading in the year at Blackheath was 28·63 inches on February 10th, and the highest was 30·62 inches on December 22nd, so that the range of reading in the year was 1·99 inch. The day of lowest mean reading was February 10th, when it was 1·05 inch below the average, and the day of highest reading was December 23rd, when it was 0·66 inch above its average.

Temperature.—With the exception of the 11 days ending February 16th, and the 17 days ending March 20th, there were not 7 consecutive days during the year on which the temperature reached its average. From the beginning of April to the end of July the average daily deficiency of temperature was 3° nearly, and from November 20th to December 27th it was as large as 9½° daily. The temperature of every month was below its average of 60 years, and there is no other instance back to 1771 of such being the case.

The highest temperature in the year was 81°·5 at Cambridge, 80°·8 at Carlisle, 80·4 at Blackheath, 80°·3 at Cockermouth and Royston, 80°·2 in London, and 80°·0 at Barnstaple, Streatley, and Somerleyton; the lowest reading was 1° both at Cambridge and Stockton near Rugby, 1°·5 at Silloth, 2°·0 at Cardington, and 3°·0 at Leicester.

Rain.—There was an excess of rain in every month excepting March, and the last three months of the year; this excess being particularly great in the months, May to August. The greatest total fall in the year was 56·77 inches at Sharples near Bolton, the next in order being 47·71 inches at Helston, 42·4 inches at Stonyhurst, and the least was 26·19 inches at Carlisle; the next in order being 27·10 inches at North Shields, 27·41 inches at Lowestoft. The greatest number of days on which rain fell was 240 at Bradford, 225 at Bywell, 223 at Stonyhurst, and 215 at Truro.

Thunderstorms occurred on 64 days in the year; they were as follows:—One at Helston on January 14th, 2 in February at Guernsey and Plymouth on the 6th and 20th, one in March on the 30th in Yorkshire

5 in April evenly spread over the country, 7 in May; none in the South; 13 in June, chiefly in the Midland and Northern Counties, 10 in July, chiefly in the North; 15 in August, general everywhere; 6 in September, chiefly in the North; one in October, and 3 in December, at the Southern stations.

Thunder was heard, but lightning was not seen, on 75 days, viz., 5 in March, 10 in April, 10 in May, 15 in June, 14 in July, 14 in August, 5 in September, one in October, and one in December.

Lightning was seen but thunder was not heard on 42 days, viz., 5 in February, 3 in March, 3 in April, one in May, 9 in June, 6 in July, 12 in August, one in September, and 2 in November.

Solar halos were seen on 68 days in the year, the greatest number in one month was 12, in June.

Lunar halos were seen on 39 nights, none were seen in the months May, June, and July.

Snow fell on 26 days in January, but on only one day, the 10th, in Guernsey, Cornwall, and Devonshire; it fell on 23 days in February; on 16 in March; on 14 in April, and on 8 in May; in April and May no snow fell at Guernsey or in Cornwall, but it was pretty general elsewhere; it fell in July at Bolton on the 4th and 8th, and at Cockermouth on the 9th; it fell on two days in the middle of October (the 14th and 15th) in the north of England; on 16 days in November, and on 11 in December. Up to May 31st snow fell on 87 days, and altogether on 119 days in the year. It fell at many places on January 1st, and at a few places on December 30th.

Hail fell on 126 days in the year, on 76 days up to June 30th, and on 50 days in the second half of the year.

Fog was very prevalent throughout the year, it occurred at one or other station on 18 days in January (mostly north of London), on 20 days in February (chiefly in the Midland Counties), on 14 days in March, on 14 days in April, on 21 days in May (but many stations, particularly in the middle of the country, were free from fog), on 10 days in June, on 18 days in July (chiefly at Torquay and Allenheads, at other stations on one or two days only), on 18 days in August (but 11 of these days were noted at Torquay; at most stations where fog is returned it was on one or two days only, and at many no fog was observed), on 18 in September (chiefly between the latitude of 52° and 54°) on 21 days in October (but scarcely any at stations south of latitude 51½°), on 18 in November (only at stations north of 51½°), and on 26 days in December (on three or four of these days in the south; on 10 or 12 at several places in the Midland Counties, and on one day only at Carlisle; and at some stations in the north there was scarcely any fog).

PRELIMINARY TABLES.

(1879.)

TABLE 1.—Estimated **Population**, and Number of **Marriages**, **Births**, and **Deaths** registered in **England**, in each of the Forty-two Years **1838–79**.

YEARS.	Estimated POPULATION in ENGLAND in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the Censuses taken in 1841–51–61–71. For the estimated numbers of the males and females in each year, and population estimates for years prior to 1838, *see* Table 101.

TABLE 2.—**Proportions** of **Persons Married, Births,** and **Deaths** to **1000** of the **Population of England,** in each of the Forty-two Years **1838–79.**

Years.	To 1000 Persons living.			The Number of Persons living

1878 - -	15·3	35·9	21·7	65	28	46
1879 - -	14·5	35·0	20·9	69	29	48
Mean in 42 years	16·5	34·2	22·2	61	29	45

NOTE.—The Table may be read thus:—In the year 1838 to every 10,000 persons living there were 154 persons married, 303 births, and 224 deaths; the numbers of persons living to every person married, birth or death, were 65, 33, and 45 respectively. The rates in this Table have been calculated upon the estimated populations given in Table 1, but no corrections have been made for the difference between the ordinary year of 365 days and the leap year.

TABLE 3.—**Proportions** of **Persons Married,** of **Births** and of **Deaths** to **1000** of the **Population** of **England,** during the Forty-two Years **1838–79.**

YEARS.	To 1000 Persons living.			The Number of Persons living.		
	Persons Married.	Births.	Deaths.	To one Person Married.	To one Birth.	To one Death.
	MEAN OF 42 YEARS.

Mean Annual Rate per 1000 in each quarter during the 42 years					13·7	16·8	15·8	19·5

Note.—The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For this inequality a correction has been made in the above calculations.

* These rates may be thus read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living, 124 persons were married.

TABLE 8.—**Marriages in England.** The Proportion per Cent. of **Minors** of each Sex, of Males and Females who **signed the Marriage Register with Marks,** and of Persons who were **Widowers** or **Widows,** in each of the Thirty-nine Years **1841–79.**

Mean Annual Rate per 1000 in each Quarter during the 42 years					35·7	35·3	33·0	32·8

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These rates may thus be read without reference to the decimal points:—In the March quarter of 1838, to 10,000 persons living 303 births were registered. In the calculation of these rates a correction has been made for the varying number of days in the different quarters, *see* note to Table 7.

TABLE **13.—Legitimate** and **Illegitimate Births** in **England** in the Forty-two Years **1838–79**; Proportion of **Males** to **Females** born.

YEARS.	BIRTHS REGISTERED.			Males born to every 100 Females born.	Males born *in Wedlock* to every 100 Females so born.	Males born *out of Wedlock* to every 100 Females so born.	Children born *out of Wedlock* to every 100 Births.

Average proportion in 42 years, 1838–79			22·2	23·2	21·2	105	109

The Table may be read thus:—In the year 1838 to every 1000 males living there were 23·4 deaths of males; to every 1000 females living there were 21·5 deaths of females; and to each 100 deaths of females there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females;* and that out of equal *numbers living* the deaths of males were as 109 to every 100 deaths of females in 1838.

TABLE 19.—**Number,** and **Annual Rate** per 1000 Persons living, of **Deaths** in **England** during each **Quarter** of the Forty-two Years **1838–79.**

Mean Annual Rate per 1000 in the four Quarters of the 42 years					24·8	21·9	20·4	21·8

* These rates may thus be read, without reference to the decimal points:—In the March quarter of the year 1838, in 10,000 of the population 262 deaths were registered. A correction has been made in these calculations for the inequality in the number of days in the different quarters, *see* note to Table 7.

NOTE.—For the causes of death in the 5 years 1838–42, and the 5 years 1847–51, see Table 7 in the Appendix to the Thirty-fourth Annual Report. The causes of death were not abstracted for the 4 years 1843–46.

* Deaths from violence were not classified according to orders prior to 1858. All deaths from violence are classified to Order I. (Accident or Negligence), unless they are specially ascribed to homicide, suicide, or execution. Order 2, comprising violent deaths in battle, is inapplicable to the civil population.

† The numbers of persons executed in the several years will not necessarily correspond with those returned for the same years in the "Criminal Returns," inasmuch as the executions therein recorded in each year are classed according to the *dates of conviction*, while the numbers in this Table are placed under the years in which the deaths are *registered*.

in each of the **28 Years 1852–1879.**

‡ The cases of angina membranacea were included with scarlet fever until 1860; for several years prior to that date they were, however, separately distinguished by a marginal note on the ticking sheet, as they have been since 1860, when they were first classed to diphtheria.

§ Included with scarlet fever until 1855.

* From 1852 to 1857, inclusive, premature birth and infantile debility were abstracted together. In order, therefore, to establish something like uniformity in the above Table, the numbers for these separate headings have been estimated from the proportions which the separate numbers bore to the sum of the two in subsequent years, when they were separately classified.

† See note referring to the classification of deaths from violence on page lxxii.

	CAUSES NOT CLASSIFIED OR DISTRIBUTED.	50·7	214·8	89·2	—	—	—	—	—	—	—

* The rates given in this Table for the various groups of years are the means of the calculated rates in the several years. Under some of the separate headings the means cannot be given for the entire period, as the classification in full detail has not been made during the whole 30 years. In a certain number of cases in each year the cause of death is not stated; in calculating the proportional numbers since 1858 these have been distributed rateably over all the specified causes in the Table.

† See note referring to the classification of deaths from violence on page lxxii.

TABLE **34.*** (*continued.*)—**Mean Annual Rate** of **Mortality** in **England** from each CLASS of CAUSES and from each CAUSE of DEATH during the **30 Years 1850–79,** and in each **Quinquenniad** of that Period; also the **Rate** of **Mortality** in the Years **1877, 1878,** and **1879.**

* The populations of these counties have been estimated to the middle of 1879 on the assumption that the rate of increase or decrease that prevailed between the two census enumerations in 1861 and 1871 was maintained up to the middle of 1879. The county totals have been adjusted in order to cast to the estimated total population of England and Wales.

NOTE.—The mean rates of mortality in these Town Districts have been calculated from the numbers supplied by the local Registrars in their Quarterly Returns, which served as the basis of the annual rates published from time to time in the Registrar-General's Quarterly Returns and Annual Summaries.

The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column of Table 70 approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* The area taken to represent the boroughs of Rochdale, Huddersfield, and Halifax, was not co-extensive throughout the seven years.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the District or Sub-districts here taken as representing the town, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

Table 70.—Population; Births and Deaths; and Rates of Mortality during 1879 in Fifty large Town Districts.

District Numbers.	Towns.	Estimated Population in the middle of the Year 1879.*	Registered during the Year 1879. Births.	Registered during the Year 1879. Deaths. Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the District or Sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Impt. D. signifies Improvement District.

* For method of framing these estimates see note * to Table 71. As the population of Devonport, Macclesfield, and Ashton-under-Lyne declined between 1861 and 1871, the numbers for these towns are estimated to have remained stationary since 1871. The estimates of the present population of Dudley, Coventry, Wigan, Barrow-in-Furness, and Middlesbrough have been based upon local information as to the increase of the inhabited houses in these boroughs.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the Districts or Sub-districts here taken as representing the towns, or by the exclusion of addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken

NOTE.—The deaths in Birmingham, Manchester, and Bristol include paupers belonging to these cities who died in Workhouses situate outside the Municipal boundaries.

* The figures in this column, excepting those for Nottingham, Salford, Oldham, and Dublin, are the numbers enumerated at the Census in April 1871, raised to the middle of 1879 by the addition of 8¼ times the annual rate of increase which prevailed between 1861 and 1871. The rate of increase of population in Nottingham, Salford, and Oldham having since 1871 exceeded that which prevailed during the ten years 1861–71, revised estimates have been adopted for those boroughs, based upon special returns of inhabited houses now existing within those boroughs. The population of Dublin is taken as stationary at the number enumerated in April 1871.

TABLE **72.**—LONDON.—**Deaths in Public Institutions** in the 52 or 53 Weeks of each of the Thirteen Years **1867–79.***

* This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year. The figures for 1879 will not agree with those given on page 100, which relate to the correct year instead of the 53 weeks; moreover, the same Institutions are not in all cases included in each list.

† Previously to the year 1870 the Royal Naval Hospital at Greenwich was classed with "Military and Naval Asylums"; since that year no In-pensioners have been received there.

Average Number living to One Annual Death in 40 years - - -	42	45	44	40	39	41

NOTE.—The populations upon which these rates of mortality have been calculated are deduced from the numbers enumerated at the four Censuses of 1841, 1851, 1861, and 1871. The rates are calculated upon the deaths registered during each natural year from 1st January to 31st December.

Hampstead and Lewisham did not form part of Registration London prior to 1847. Wandsworth was not included in Registration London until the commencement of 1840, but the facts for that district have been included in calculating the rates in the above Table for the years 1840-43.

Certain alterations affecting the West and Central groups of districts were made in the year 1868, but no corrections have been made in the results given in this Table for any year prior to 1861.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since 1871 has been the same as that which prevailed between 1861 and 1871; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts in the Outer Ring.

TABLE **76.**—**Births** and **Deaths** in 1879 in **30 Foreign Cities.**

CITIES.	POPULATION (enumerated or estimated).	BIRTHS.	DEATHS.	ANNUAL RATE per 1000 Persons living.		DEATHS from SEVEN ZYMOTIC DISEASES.						
		Exclusive of Stillborn.		Births.	Deaths.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Typhus & Typhoid Fevers.	Diarrhœal Diseases.†

Winter . . Jan., Feb., March.
Spring . . April, May, June.
Summer . . July, Aug., Sept.
Autumn . . Oct., Nov., Dec.

or *below* the average to the extent of the quantities to which these signs are prefixed.

TABLE **83.—Area,** estimated **Population,** and **Marriages, Births,** and **Deaths** registered in the **United Kingdom,** in the Year **1879.**

—	Area in Acres.	Area in Hectares.	Estimated Population in the middle of the Year 1879.	Marriages.	Persons Married.	Births.	Deaths.
United Kingdom	77,635,301	31,416,757	34,155,126	228,798	457,596	1,141,453	704,673
Great Britain - -	56,815,354	22,991,528	28,792,789	205,544	411,088	1,006,125	599,584
England and Wales -	37,319,221	15,102,008	25,165,336	182,082	364,164	880,389	526,255
Scotland - - -	19,496,133	7,889,520	3,627,453	23,462	46,924	125,736	73,329
Ireland * - - -	20,819,947	8,425,229	5,362,337	23,254	46,508	135,328	105,089

* On the authority of the Registrar General of Ireland it may be assumed that the numbers of marriages, births, and deaths, in that part of the United Kingdom are understated through defective registration.

TABLE **84.—Proportion** per **1000** of **Marriages, Births,** and **Deaths** to the Population of the **United Kingdom,** in the Year **1879.**

—	Acres to a Person.	Hectares to a Person.	To 1000 Persons living.			
			Marriages.	Persons Married.	Births.	Deaths.
United Kingdom - -	2·27	·92	6·70	13·4	33·4	20·6
Great Britain - - -	1·97	·80	7·14	14·3	34·9	20·8
England and Wales - -	1·48	·60	7·24	14·5	35·0	20·9
Scotland - - - - -	5·37	2·17	6·47	12·9	34·7	20·2
Ireland - - - -	3·88	1·57	4·34	8·7	25·2	19·6

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

TABLE **85.—Population, Area, Births,** and **Deaths** in the **Islands** in the **British Seas** in each of the Twenty-nine Years **1851–1879.**

Years.	Islands in the British Seas.		Isle of Man.		Island of Jersey.		Guernsey and adjacent Islands.	
	Births.	Deaths.	Births.	Deaths.	Births.	Deaths.	Births.	Deaths.

Total	1,594,644	5,747,249	1,276,091	291,755	8,909,739

Average annual emigration from the United Kingdom — From 1815 to 1879 - - 137,073; For the 10 years 1870–79 - - 215,304

* The returns do not distinguish the emigration to Australia during the 10 years 1815–24, but it appears from other sources that the emigrants who went to that country were in 1821, 320; in 1822, 875; in 1823, 543; in 1824, 780; and in 1825, 458 persons. These numbers are not included in the totals of this Table.

† The numbers of emigrants of British origin were 228,345 in 1873; 197,272 in 1874; 140,675 in 1875; 109,469 in 1876; 95,195 in 1877; 112,902 in 1878; and 164,274 in 1879.

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return *includes seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a *seaman* die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a *passenger* die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

TABLE **99.**—RETURN of the AGES, RATING, and CAUSES of DEATH of 3692 **Seamen** reported to the BOARD OF TRADE in the Year 1879 as having died in the **British Merchant Service.** (*Parliamentary Return, Session of* 1879.)

TABLE 100.

ESTIMATED POPULATION OF THE UNITED KINGDOM,

(including ISLANDS in the BRITISH SEAS)

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of the Census Years.	PERSONS.	MALES.	FEMALES.
1801 -	16,302,410	8,096,082	8,206,328
1811 -	18,532,522	9,194,348	9,338,174
1821 -	21,300,573	10,519,256	10,781,317
1831 -	24,423,588	12,004,025	12,419,563
1841 -	27,077,095	13,325,889	13,751,206
1851 -	27,764,034	13,656,998	14,107,036
1861 -	29,358,927	14,397,427	14,961,500
1871 -	31,914,985	15,622,725	16,292,260

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, the proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

The above numbers have been deduced by adding to the estimated population of the United Kingdom, as given in Table 101, the enumerated population of the Islands in the British Seas, and the Army, Navy, and Merchant Service abroad (*see* p. vii. of Vol. I. Census of England and Wales, 1871).

TABLE **101.—Population** of the **United Kingdom** estimated to the middle of each
British Seas, and of the portions of the **Army,**

TABLE 102.—**Fluctuations** in the **Marriage Rate** of **England**

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE. Current Events and General State of the Country.	Result of the Harvest.*	AVERAGE PRICE OF WHEAT per Quarter in England. s.	d.
1839	15·9	Chartist riots. Chinese war - - - - - -	Deficient - -	70	8
1840	15·6	Penny postage came into operation. Canton blockaded -	Do. - - -	66	4
1841	15·4	British expelled from Cabul. Revenue deficient - -	Very deficient -	64	4
1842	14·7	Turn-out of cotton spinners. Great general distress. Revenue deficient. Afghans defeated - - -	Above the average	57	3
1843	15·2	Continued depression in manufacturing industry. Reduced value of agricultural produce. Deficiency in revenue. Repeal agitation in Ireland. Rebecca riots in Wales - - - - - - - -	Do. - - -	50	1
1844	16·0	After a long period of depression, the opening of the year found the country for the most part in a thriving condition, with an increasing revenue and a reviving trade	Very good - -	51	3
1845	17·2	General prosperity of the country. Improvement in the revenue. Potato disease in England and Ireland. Short corn crops. Great increase of railway undertakings. Speculation mania, followed by commercial panic. Sikh war - - - - - - -	Deficient - -	50	10
1846	17·2	Caffre war. Free Trade Bill passed. Corn Law repealed -	Do. - - -	54	8
1847	15·8	Commercial panic. £10,000,000 for Irish relief. Act relating to Free Trade came into operation. Owing to partial failure of crops the duty on corn was suspended till March 1848 - - - - - - -	Above the average	69	9
1848	15·9	Chartist riots. Sikh war. Agitation in Ireland. Revenue deficient - - - - - - - -	Very bad - -	50	6
1849	16·2	Cholera epidemic. Punjaub annexed. Duty on corn reduced to 1*s.* per quarter - - - - - -	Above the average	44	3
1850	17·2	Improvement of trade and revenue. Diminution of pauperism. Depressed condition of the agricultural classes was the only exception to the general prosperity of the country. Caffre war ended - - - - - -	Below the average	40	3
1851	17·2	Australian gold discovered. Great Exhibition opened -	About the average	38	6
1852	17·5	Napoleon III. Emperor. Pegu annexed - - -	Below the average	40	10
1853	17·9	Rise in the price of provisions owing to the bad harvest, and to general prosperity especially of the labouring classes; the very poor, however, suffered great privations - - - - - - - - -	Bad - - -	52	11
1854	17·2	War declared against Russia - - - - - -	Extremely good -	72	5
1855	16·2	Russian war continued - - - - - -	Below the average	74	8
1856	16·7	Russian treaty. War with China and Persia. Revenue deficient - - - - - - - - -	About the average	69	2
1857	16·5	Indian revolt. Great commercial panic - - -	Above the average	56	5
1858	16·0	The commercial disturbance and distress of 1857 caused the revenue to fall short of the estimates during the the greater part of the year, but towards its close there were indications of improvement. The cost of the necessaries of life was lower than in 1856 or 1857 -	Do. - - -	44	3
1859	17·0	At the commencement of the year pauperism had decreased and a spirit of general contentment prevailed. Treaties of commerce were concluded between England and Russia, and also with Japan. War with China -	Under the average	43	10
1860	17·1	Commercial treaty with France. War in New Zealand. War with China; surrender of Pekin. Neapolitan revolt. Annexation of Savoy and Nice to France -	Very deficient -	53	3
1861	16·3	Famine in N.W. provinces of India. Owners of cotton mills in Lancashire began to employ hands on short time. Revenue deficient. Disruption of United States	Under the average	55	4
1862	16·1	Distress in cotton districts. Revenue deficient - -	Much below the average - -	55	5
1863	16·8	Continued distress in the cotton districts. Marriage of the Prince of Wales. War in New Zealand - -	Abundant - -	44	8

* The particulars in this column, from 1839–1854, are taken from "*Tooke and Newmarch on Prices*," vol. 6, p. 482 *et seq.*, and for most of the years 1855–1877 the information has been extracted from the "*Mark Lane Express*."

l some of the **Causes** which have contributed thereto, 1839–78.

† The real value of Imports was not ascertained until the year 1854, and no results were published until the year 1855.

TABLE 102. (*continued*)—FLUCTUATIONS in the MARRIAGE RATE of ENGLA

YEARS.	MARRIAGE RATE in ENGLAND. Persons married to 1000 Persons living.	CAUSES which have probably contributed either to raise or depress the MARRIAGE RATE. Current Events and General State of the Country.	Result of the Harvest.	AVERAG PRICE OF WHE per Quarte in Englar	
				s.	d.
1864	17·3	Duty on corn 3*d.* per cwt. War in New Zealand brought to a close - - - - - - - - -	Good - - -	40	2
1865	17·5	Cattle plague. Fenian conspiracy in Ireland - -	Below the average	41	9
1866	17·5	Great monetary panic in London. Cholera epidemic -	Very unfavourable	49	11
1867	16·5	General commercial depression, and distress occasioned by want of employment among the artisan class. Rise in the price of bread - - - - - - -	Deficient - -	64	5
1868	16·1	Abyssinian war. Revenue deficient - - - -	Productive - -	63	9
1869	15·9	Woolwich dockyard closed. Duty on corn ceased. No healthy revival of trade since commercial crisis of 1866. Revenue deficient. Opening of Suez canal - -	Deficient - -	48	2
1870	16·1	Trade and commerce depressed. Franco-German war -	Under the average	46	10
1871	16·7	Revival of industrial and commercial activity. Cattle disease. Rise in prices and in the wages of labour. Bank Holiday Act - - - - - - - - -	Deficient - -	56	10
1872	17·5	The year commenced with every promise of commercial prosperity, and there was a great increase of railway traffic. Great rise in the prices of the common commodities of life, which pressed hardly upon the salaried middle classes. Payment by France to Germany of 220 million pounds sterling - - - - -	Do. - -	57	1
1873	17·6	American railway panic. Reaction from the high prices and excited demands in 1871 and 1872. Trade continued moderately active - - - - -	Much below the average - -	58	8
1874	17·1	Strikes and disputes between masters and men. Wages in mining, iron, and steel trades fell. Price of commodities and wages generally declined - - -	Very good - -	55	9
1875	16·8	Iron, coal, hardware, and shipbuilding trades agitated by strikes. Repudiation by Turkey of part of its obligations. Fall in price of silver - - - -	Very unsatisfactory	45	2
1876	16·7	Reduced wages. Commercial failures - - -	Unsatisfactory -	46	2
1877	15·8	Prevalence of strikes. The year was unfavourable for the farmer. Depression on the Continent and in United States. Political conflict in France. War between Russia and Turkey. Famine in Southern India -	Do. - -	56	9
1878	15·2	War continued between Russia and Turkey. Treaty of Berlin in June. In September rupture between Indian Government and the Ameer of Afghanistan. Prices of commodities, and wages, continued to decline. Prevalence of strikes, resulting generally in the defeat of the strikers. Bank failures. Failure of iron and coal industries. Trade and commerce depressed - - -	Good - - -	46	5
1879	14·5	———	One of the worst on record - -	43	10

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating to these are shown in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

TABLE **106.**—SWEDEN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1850** to **1879.**

1879	4,578,901	28,635	57,270	139,043	77,152	12·6	30·5	16·9

* The populations for these years were enumerated at the respective Censuses. The decrease observable in the population in the years 1868 and 1869 is attributed to failure of crops and consequent emigration.

† Cholera was epidemic in the years 1853, 1857, and 1866. In 1874 small-pox caused 4063 deaths, the highest number in any year since 1801. In 1877 scarlet fever caused 7426 deaths and diphtheria 3367 deaths.

TABLE **107.**—AUSTRIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1853** to **1879.**

NOTE.—The Returns for Austria include Hungary, Croatia, Sclavonia, and Transylvania from 1853 to 1862 inclusive; since 1862 the returns exclude those portions of the empire. Until 1864 Venetia was included; since 1864, however, it has been excluded. The facts for Hungary and Transylvania for years subsequent to 1865 appear in Table 78.

* Census years.

† The excessive mortality in the year 1866 was due to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in the year 1873.

TABLE **108.**—HUNGARY AND TRANSYLVANIA. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1866** to **1879.**

1879	—	—	—	—	—	—	—	—

NOTE.—The population in the four years 1862–65 and in the years 1867–69 was estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The returns since the year 1860 include the three newly annexed departments. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years. † Cholera prevailed in 1865–66, and war raged in 1870 and 1871.

TABLE **115.**—SPAIN. **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1861** to **1870.**

Years.	Numbers.					Proportions per 1000 of the Population.		
	Estimated Population.	Marriages.	Persons Married.	Births.	Deaths.	Persons Married.	Births.	Deaths.
1861	15,879,868	130,731	261,462	624,096	417,764	16·5	39·3	26·3
1862	16,065,124	128,696	257,392	615,919	430,663	16·0	38·3	26·8
1863	16,210,263	124,176	248,352	606,800	461,661	15·3	37·4	28·5
1864	16,340,323	126,303	252,606	629,546	499,486	15·5	38·5	30·6
1865	16,423,793	128,917	257,834	622,050	538,580	15·7	37·9	32·8
1866	16,579,090	131,981	263,962	618,981	463,684	15·9	37·3	28·0
1867	16,716,151	118,409	236,818	624,212	487,151	14·2	37·3	29·1
1868	16,853,212	111,684	223,368	579,464	548,690	13·3	34·4	32·6
1869	16,883,986	137,120	274,240	602,287	550,660	16·2	35·7	32·6
1870*	16,935,613	105,543	211,086	539,786	509,669	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,536. The estimated Population for the Years subsequent to 1861 has been deduced from the Excess of Births over Deaths in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* No figures have been received for years subsequent to 1870, in consequence of the disturbed condition of the country.

TABLE **116.**—ITALY (inclusive of VENETIA). **Population; Number,** and **Proportion** per 1000, of **Persons Married, Births,** and **Deaths,** in each of the Years **1864** to **1879.**

1876	27,625,825	225,453	450,906	1,083,721	796,420	16·2	39·0	28·7
1877	27,890,085	214,972	429,944	1,020,037	787,817	15·3	36·7	28·1
1878	28,110,158	199,885	399,770	1,012,475	813,550	14·2	35·9	28·8
1879	28,323,356	213,096	426,192	1,064,193	836,682	19·09	37·6	30·0

NOTE.—The Population was estimated in the following manner: To the population of Italy, exclusive of Venetia, according to the census on 31st December 1861, was added the population of Venetia, according to the Austrian census in 1858, and also the excess of Births over Deaths in each year. No correction was made either for immigration or emigration. The population for 1871 (except for Rome, where the census was not taken until 1872) is that enumerated at the census on the last day of December 1871. The facts for Rome were first included with those for the kingdom of Italy in 1872.

* Census year.

† The decrease of marriages in 1866 may be attributed to the law, which then came into operation, introducing civil marriage and rendering the church marriages of no legal effect. There had been a marked increase in 1865 resulting from a wish to evade the law about to come into operation. After the 1st of January 1866 the marriages solemnized only in the churches, without civil contract, not being legally recognized, have not been registered; their number, which was very great in 1866 and the following year, is happily decreasing.

TABLE **117.—Changes** in the **Constitution** of the **Registration Districts** and **Sub-districts** during the Year **1879.**

[The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*. The figures in Cols. 1. and 4. show the number of the District and Sub-district.]

* The *Registration or Union Counties* consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1879.

‡ Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. This column also includes 115 cases of marriage after divorce, see Table E, page x.

* The parishes which formed the district of Presteigne (607) were, on its dissolution, added to the Superintendent Registrars' Districts of Kington (343) and Knighton (608) on the 1st July 1877.

† The numerical arrangement, 1 to 627 was adopted on 1st January 1871. *Six* new Superintendent Registrars' Districts, viz., Fulham (1*a*), Prestwich (407*a*), Barrow-in-Furness (481*a*), Middlesbrough (532*a*), Lanchester (546), and Pontardawe (587*a*), have been *constituted* since 1871; and *two* Superintendent Registrars' Districts have been *dissolved*, viz., Shrewsbury (352), which has been *incorporated with* Atcham (351), and the parishes forming the District of Presteigne (607) have been added to the Superintendent Registrars' Districts of Kington (343), and Knighton (608). Thus at the end of the year 1879, the number of Superintendent Registrars' Districts was 631.

* The *Registration Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

† These areas were furnished to the Registrar General by the Ordnance Survey Department for the purposes of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1879—*continued.*

* The *Superintendent Registrars' Districts* (631 in number at the end of the year 1879) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to their local position, under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse Establishment receiving inmates from other Districts than the one in which it stands; and repetitions of these letters show the number of such Institutions in any District.

† Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

II.—SOUTH EASTERN COUNTIES.—MARRIAGES, BIRTHS, AND DEATHS, 1879—DISTRICTS—*continued.*

* The Sub-districts (2180 in number at the end of the year 1879) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1879 are given on pages 99-120.

* 20 : 1, 2.—The new sub-district of Bromley was formed by the severance of the parish of Bromley, St. Leonard, from the sub-district of Bow (*see* Table 117, p. cliii). As this change was effected on 1st January 1879, the facts in this table of Births and Deaths relate to the sub-districts as they were then constituted.

I.—LONDON.—BIRTHS AND DEATHS, 1879—SUB-DISTRICTS—*continued.*

No.	SUB-DISTRICTS.	Area in Statute Acres.	Population, 1871.	Total Births (exclusive of Still-born).	Total Deaths.	Births (exclusive of Still-born). Legitimate and Illegitimate. Males.	Legitimate and Illegitimate. Females.	Illegitimate. Males.	Illegitimate. Females.	Deaths. Males.	Deaths. Females.	Excess of Births over Deaths.

* 107 : 2.—Certain changes were effected in the constitution of the sub-district of Bramley on 1st January and 1st November 1879 (*see* Table 117, p. cliii). The facts given above for this sub district relate to an area slightly larger for the last two months, than for the previous ten months, of the year.

† 114 : 4.—An alteration was made in the constitution of the sub-district of Nuneham Courtney on 1st October 1879 (*see* Table 117, p. cliii). The facts given above for this sub-district therefore relate to somewhat different populations for the first nine months and the last three months of the year.

* 239 : 1.—The two sub-districts of Swaffham and Saham Toney, into which the district of Swaffham was divided previously to 1st October 1879, were on that date united for registration purposes (see Table 117, p. cliii). The facts given above are shown as if the alteration had taken place on 1st January 1879.

DEATHS IN PUBLIC INSTITUTIONS,

1879.

THE following pages contain the numbers of deaths registered during 1879 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1,482 Institutions; of which 726 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 670 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1,482 Institutions 52,982 deaths were registered during the year, or 10·1 per cent. of the total deaths in England and Wales, against 9·9 and 9·5 per cent. in the two preceding years; 35,180 occurred in Workhouses, 12,675 in Hospitals, and 5,127 in Lunatic Asylums. The proportion to total deaths was 6·7 per cent. in Workhouses, 2·4 in Hospitals, and 1·0 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the **Public Institutions** of **England** in the **Year 1879.**

NOTE.—The Table may be read thus: Of the 271,496 deaths of Males, 67,077 were those of children under one year of age; 22,044 those of the age 1 and under 2 years; 9610 of the age 5 and under 10 years; 5747 of the age 15 and under 20 years, and so on.

* This column includes the deaths of 27 males registered as aged 100 years and upwards; namely, 11 aged 100, 5 aged 101, 5 aged 102, 2 aged 103, one aged 104, 2 aged 105, and one aged 110 years. The districts in which these deaths occurred and the cause of death in each case are stated in Table 30, page lxxi.

The *Causes of Death* in England and in London, in combination with the Ages at Death, are given at pp. 146–161.

1879.

CAUSES OF DEATH AT DIFFERENT AGES IN ENGLAND AND LONDON.

CAUSES OF DEATH IN DIVISIONS AND COUNTIES.

DEATHS FROM SEVERAL CAUSES IN DIVISIONS, COUNTIES, AND DISTRICTS.

VIOLENT DEATHS.

The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all diseases are classified in the following and in similar Tables of Causes of Death under 116 heads; some of these heads, however, include groups of diseases which are very distinct from one another, but which either are fatal to only a *few persons*, or are often confounded with other diseases. The rule has been to refer the distinct diseases to analogous heads under which the cases were so numerous, that the additional numbers of diseases really distinct would not materially interfere with the calculated proportions. The Table for England and Wales (pp. 146–155) gives printed *in Italics* the other causes of death bracketed with the heads limited to 116 in the condensed Tables. It will be noticed, for example, that in the class of Local Diseases—such as diseases of the organs of circulation for the sake of brevity designated "Heart Disease,"—in a certain number of instances the precise nature of the malady is given, in other instances al that is recorded is the disease of the organs without any further distinction.

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report. The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 627 in the Abstracts for the year 1871.*

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 227) *and "Index of certain Towns"* (page 237).

A

Aberayron, 600.
Abergavenny, 579.
Aberystwith, 601.
Abingdon, 114.
Alcester, 398.
Alderbury (Salisbury), 254.
Alnwick, 560.
Alresford, 104.
Alston, 565.
Alton, 105.
Altrincham, 447.
Alverstoke, 88.
Amersham, 139.
Amesbury, 253.
Ampthill, 172.
Andover, 109.
Anglesey, 627.
Ashborne, 440.
Ashby-de-la-Zouch, 407.
Ashton-under-Lyne, 468.
Acton, 388.
Atcham (Shrewsbury) 351.
Atherstone, 390.
Auckland, 543.
Axbridge, 315.
Axminster, 269.
Aylesbury, 142.
Aylsham, 223.
Aysgarth, 537.

B

Bakewell, 442.
Bala, 620.
Banbury, 154.
Bangor, 625.
Barnet, 127.
Barnsley, 505.
Barnstaple, 285.
Barrow-in-Furness, 481*a*.
Barrow-upon-Soar, 409.
Barton Regis, 321.
Barton-upon-Irwell, 464.
Basford, 431.
Basingstoke, 107.
Bath, 317.
Battle, 68.
Beaminster, 267.
Bedale, 535.
Bedford, 170.
Bedminster, 319.
Bedwelty, 580.
Belford, 561.
Bellingham, 558.
Belper, 439.

Billericay, 190.
Billesdon, 403.
Bingham, 436.
Birkenhead, 454.
Birmingham, 387.
Bishop Stortford, 130.
Blaby, 404.
Blackburn, 474.
Blandford, 260.
Blean, 57.
Blofield, 228.
Blything, 216.
Bodmin, 294.
Bolton, 462.
Bootle, 573.
Bosmere, 211.
Boston, 418.
Bourn, 415.
Brackley, 155.
Bradfield, 117.
Bradford-on-Avon, 249.
Bradford (Yorkshire), 496.
Braintree, 199.
Bramley, 499.
Brampton, 567.
Brecknock, 604.
Brentford, 125.
Bridge, 55.
Bridgend, 586.
Bridgnorth, 348.
Bridgwater, 307.
Bridlington, 524.
Bridport, 268.
Brighton, 76.
Bristol, 320.
Brixworth, 161.
Bromley, 40.
Bromsgrove, 385.
Bromyard, 341.
Buckingham, 145.
Builth, 603.
Burnley, 472.
Burton-upon-Trent, 368.
Bury, 463.
Bury St. Edmunds, 206.

C

Caistor, 425.
Calne, 245.
Camberwell, 25.
Cambridge, 178.
Camelford, 290.
Cannock, 371.
Canterbury, 56.
Cardiff, 583.
Cardigan, 597.
Carlisle, 569.
Carmarthen, 593.
Carnarvon, 624.
Castle Ward, 555.
Catherington, 102.
Caxton, 176.
Chapel-en-le-Frith, 443.
Chard, 309.
Cheadle, 366.
Chelmsford, 191.
Chelsea, 2.
Cheltenham, 335.
Chepstow, 577.
Chertsey, 30.
Chester, 452.
Chesterfield, 441.
Chester-le-Street, 549.
Chesterton, 177.
Chichester, 83.
Chippenham, 244.
Chipping Norton, 153.
Chipping Sodbury, 322.
Chorley, 475.
Chorlton, 465.
Christchurch, 92.
Church Stretton, 346.
Cirencester, 331.
Cleobury Mortimer, 347.
Clitheroe, 473.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring to the "*Abstract of Marriages*," District number 600 (see page 24); and the numbers of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the respective Tables.

Clun, 345.
Clutton, 316.
Cockermouth, 571.
Colchester, 195.
Congleton, 450.
Conway, 626.
Cookham, 120.
Corwen, 619.
Cosford, 204.
Coventry, 393.
Cranbrook, 51.
Crediton, 282.

INDEX OF SUB-DISTRICTS.

This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (570; 2) is the 2d Sub-District of the Wigton District, No. 570.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	570; 2
Abbots Bromley	Uttoxeter	367; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	136; 4
Aberdare	Merthyr Tydfil	585; 4
Aberdaron	Pwllheli	623; 3
Aberford	Tadcaster	514; 1
Abergavenny	Abergavenny	579; 3
Abergele	St. Asaph	617; 2
Abergwessin	Builth	603; 1
Aberystruth	Bedwelty	580; 1
Aberystwith	Aberystwith	601; 2
Abingdon	Abingdon	114; 2
Abthorpe	Towcester	156; 1
Accrington	Haslingden	471; 5
Acton	Brentford	125; 5
Addingham	Skipton	484; 6
Alberbury	Atcham	351; 4
Albrighton	Shifnal	349; 1
Albury	Guildford	31; 3
Alcester	Alcester	398; 2
Aldbrough	Richmond (Yrks.)	539; 4
Aldbrough	Skirlaugh	522; 3
